Data Loss Prevention Policy Management 'as-a-Service'

HELPING YOU SUCCEED WITH YOUR DATA PROTECTION STRATEGY

Gradian's DLP Policy Management 'as-a-Service' is vendor-agnostic. It provides real time management of all DLP policy 'rules' held within your estate, providing a detailed breakdown of severity-based triggers, actions and dispositions.

DLP is a holistic toolset which must be managed by multiple stakeholders throughout the organisation. This service simplifies policy rule management by externalising your DLP policy rules from within complex tooling into an intuitive platform. It aligns your project/BAU team(s) with our deep policy rule expertise.

Prioritising What Matters

Simplicity
Provides non-technical resources with the ability to digest and understand what your DLP policy rules are actually doing

Collaboration
Share the policy rule platform across departments, add comments and work together to ensure all your requirements are met

Version Control
Provides more detail than traditional DLP tools allowing you to keep track of all policy changes

Universal
Compatible with any DLP toolset as the policy rule platform is not tied to a specific toolset

Translatable
Enables quicker and more accurate migration of policies between DLP toolsets

Granularity
Specified policies can be shared with specific parties to remove the possibility of privilege creep

Key Benefits

- ✓ Unlimited access to DLP policy rule and DLP engineering expertise to help make your policies work for you
- ✓ Fully externalised DLP policy rules allow for review without logging into complex DLP toolsets
- ✓ Provides the environment to support policy rule collaboration contributing to fewer false positives
- ✓ Helps to reduce policy rule conflicts and errors which adversely impact the user experience
- ✓ Minimal time required – Gradian handles all the heavy lifting
