1 Service Description

A fractional, DBA-led service supporting the migration of SQL Server workloads from on-premises environments to Azure SQL Database and Azure SQL Managed Instance. Supports NHS and public-sector organisations adopting hybrid and cloud database architectures.

2 About Our Service

This service delivers end-to-end SQL Server to Azure SQL migration support led by senior DBAs. It includes readiness assessments, target architecture design, migration execution, validation, and post-migration stabilisation to ensure secure and performant cloud platforms.

3 Service Features

- Fractional DBA-led migration support
- SQL Server cloud readiness assessments
- Azure SQL target architecture design
- Migration planning and execution
- Data validation and reconciliation
- Cutover planning and support
- Azure SQL performance optimisation
- High availability and resilience design
- Security and compliance continuity
- Post-migration stabilisation support

4 Service Benefits

- Reduced risk SQL Server cloud migration
- Structured and controlled migration approach
- Maintains performance and availability
- Supports hybrid transition strategies
- Avoids costly migration rework
- Ensures security and compliance
- Accelerates Azure SQL adoption
- Access to senior DBA migration expertise
- Predictable delivery and governance
- Improved long-term cloud outcomes
