CLARIA DATA GOVERNANCE SERVICE DEFINITION

Claria Data Governance Consulting helps organisations design and implement robust data governance policies that are both practical and strategic. Our goal is to establish a well-executed, end-to-end data governance strategy that defines how your organisation manages, protects and uses its data throughout its entire lifecycle

Core Service Offerings

- **Data governance maturity assessments:** Understand your current state and identify capability gaps.
- **Strategy design and roadmap development:** Define the governance journey aligned to your business needs.
- **Data cataloging and metadata management:** Bring visibility and structure to your data assets.
- **Policy and framework definition:** Establish clear rules, standards and models for sustainable governance.
- **Stewardship models and role definition**: Define roles, responsibilities and ownership structures.
- **Implementation of governance platforms and tooling:** Select and implement the right platforms, tools and automation.
- **Change management and training:** Support your teams with the skills and adoption needed for lasting impact.

Key Benefits for Clients

- **Trusted Decision-Making:** Eliminates conflicting reports and "gut-feel" choices by providing a single source of truth.
- **Operational Efficiency:** Reduces the time employees spend "data wrangling" or searching for valid information by up to 50%.
- **AI Readiness:** Ensures your data foundation is clean and well-governed enough to support reliable machine learning models.
- **Enhanced Security:** Protects sensitive information through role-based access controls and proactive classification.

Engagement Model

Claria can follow a phased approach, beginning with a **Maturity Assessment** to baseline current capabilities, followed by **Implementation** (tool selection and pilot programs), and finally **Operationalisation** through staff training and culture change.
