STRIPE OLT

CYBER SECURITY SERVICES

ABOUT US

Stripe OLT stand at the forefront of cloud and cyber security expertise. We deliver holistic, Cyber Security, Microsoft Cloud & IT solutions to meet the needs of UK based organisations that are battling an ever-evolving technology landscape.

Specialising in Microsoft cloud and security technologies, our commitment to Microsoft technology is unwavering. We seamlessly integrate it into our 24/7 operations, offer it as a valued solution to our clients, and are deeply passionate about its potential to drive transformation.

Proudly providing services that are underpinned by a 20-year legacy of expertise, and strategically guided by highly-certified consultants, we support critical infrastructures in established organisations – delivering solutions for likes of MoneySuperMarket, Hargreaves Lansdown and National Rail.

Through our comprehensive service offerings, we ensure that your organisation can embrace digital transformation confidently, with the assurance of being protected by the best.

OUR CYBER SECURITY SERVICES

OFFENSIVE SERVICES

PENETRATION TESTING SERVICES

We provide a variety of essential penetration testing solutions, to cover a range of cloud and on-premises requirements, these include:

- Mobile
- Web App
- Cloud
- Network
- Wireless

If you're looking for an offensive cyber security assessment, conducted by CREST certified ethical hackers, get in touch today.

RED TEAM ASSESSMENT

This type of simulated cyber-attack takes security testing to the next level.

With our Red Team Assessment, our ethical hackers will replicate known cyber-attack Techniques, Tactics and Procedures (TTPs), acting as an adversary to challenge the strength of your people, processes, technology, and physical security.

VULNERABILITY ASSESSMENT

The cloud evolution has helped to shape the current digital landscape, but with fast progress comes an ever-changing threat landscape, and in turn a shifting set of security challenges.

Our security Vulnerability Assessments help with this challenge by defining, identifying, classifying and prioritising vulnerabilities in computer systems, applications and network infrastructures.

THREAT MANAGEMENT SERVICES

INCIDENT RESPONSE SERVICES

Stripe OLT's highly certified Incident Response team are here to help businesses get back on track. Whether it's to help an organisation recover from an attack or prepare them for a potential breach with an incident response plan, speak to our team for more information.

DIGITAL FOOTPRINT REVIEW

With our Digital Footprint Review, business leaders can gain an in depth understanding of their online presence, from hidden social media activity to breached credentials checks. Our ethical hackers have the power to re-create your digital profile, through the eyes of a malicious actor.

Tailored to senior stakeholders, this service will help leaders understand the risks associated with vulnerable, open source information.

ATTACK SURFACE REVIEW

Our Attack Surface Review (ASR) has been developed to enable organisations to understand how their organisation looks to the outside world, from a malicious actor's perspective.

This service explores identified credentials, exposed network devices, key misconfigurations and public facing system vulnerabilities, to help you understand how your potential vulnerabilities could be used or targeted for nefarious purposes.

MANAGED SECURITY OPERATIONS CENTRE

Our award-winning 24/7 Managed Security Operations Centre provides businesses of all sizes with enterprise-level threat detection and incident response capabilities, without the need for heavy internal resourcing.

Underpinned by cutting-edge Microsoft security technologies, our security plans include:

Deploy: For organisations that want the security capabilities of Microsoft Sentinel, but plan to manage it independently, in-house.

Monitor // EDR: Built to suit IT leaders that need extra eyes on their environment. We deploy and provide 24/7/365 security monitoring.

Manage // XDR: For those that want to take their business security one step further and gain a dedicated team to monitor and manage all of their security alerting.

360° // MSOC: This plan delivers unparalleled security management. Your business will benefit from a fully managed security suite that detects, triages, and remediates threats in real time, in addition to gaining educational user empowerment training.

All of the above security plans are supported by our UK-based SOC, comprised of ex-military personnel, cyber security analysts, SIEM engineers, ethical hackers and threat intelligence analysts who, as a team, are a virtual extension of our customers' in-house IT security resource.

> We have experimented with several service providers, and none have succeeded in delivering a quarter of the value that Stripe OLT provides. They consistently exhibit a high level of responsiveness, always making time to address any inquiries."

MICROSOFT SECURITY SERVICES

MICROSOFT 365 SECURITY GAP ANALYSIS

Our security gap analysis is a technical assessment of your M365 infrastructure, relating specifically to Microsoft 365 cloud services. In carrying out this assessment, we'll help you understand how your technical controls are configured, where they could be improved to remove vulnerabilities and in turn, show you how to effectively implement them.

MICROSOFT SENTINEL CONSULTANCY SERVICES

The Microsoft Sentinel security platform is one of the leading cloud-native, Security-Information-Event-Management (SIEM) and Security-Orchestration-Automated-Response (SOAR) solutions on the market, and our team is here to help you get the most out of it. Our consultancy services range from onboarding and adoption projects, to migration and modernisation solutions.

MICROSOFT DEFENDER CONSULTANCY SERVICES

The Microsoft Defender eco-system is vast - from Defender for Cloud and Defender for Endpoint, to Defender for Business and Defender for Identity. Navigating this suite of tools can be complex, and in turn potentially challenging to get the most out of. Whether you're looking to deploy a specific Defender product, optimise your existing toolset, or help your team adopt this technology, our certified Microsoft security experts are here to help.

INTUNE CONSULTANCY

Microsoft Intune, is a cutting-edge, cloud-based service focussed on mobile device management (MDM) and mobile application management (MAM). Intune is a favoured toolset in the Microsoft security stack because of the flexibility provided in application management, including the deployment and restriction of apps - this is a crucial technology in today's remote working world and our team can help your organisation get the most out of it.

ADVISORY SERVICES

BREACH & ATTACK SIMULATION SERVICES

Looking for customised attack simulations for better adversary insight?

Increase visibility and enhance your cyber security resilience with bespoke breach and attack simulation services, customised to your needs and digital environment.

We can help you with:

- Breached credential simulation
- Phishing attack simulation
- Ransomware simulation

CYBER SECURITY USER TRAINING & AWARENESS

82% of cyber security breaches involve a human element, yet less than a third of businesses report their staff have undergone any formal cyber security awareness training.

Turn your number one weakness into your first line of defence, with our targeted, in-person cyber security employee training courses.

CYBER ESSENTIALS & CE PLUS

The Cyber Essentials and Cyber Essentials PLUS certifications are prestigious, government-endorsed, and NCSC-supported accreditations designed to protect your business against a wide range of cyber threats. Accredited by IASME, one of the leading certification bodies, we hold the authority to conduct assessments for both Cyber Essentials and Cyber Essentials Plus certifications. Our expert team is committed to guiding you through every step of the certification process, ensuring your business not only meets but exceeds the required security standards
