Maintenance will be performed outside of the period of Service Desk availability listed above and we will inform the customer with details of the planned maintenance and timescales for completion with a minimum of 5 working days’ notice. Unplanned maintenance will be immediately communicated to the customer along with the action to be taken.

6.2 Hosting Services

StatMap contracts its IT hosting and infrastructure management services to its partner, OVHcloud.

Microsoft is a provider of managed IT services specialising in highly resilient, high quality IP network, colocation, managed application and cloud hosting services. The primary hosting location is the OVHcloud South East data centre (located in Erith, Kent). We have a comprehensive SLA in place for the managed hosting service we use. This includes physical space, hardware, security, internet connection, monitored and managed service & SLA reporting.

6.3 Backup and Recovery

Customer specific business and application data are regularly backed up by StatMap.

We make extensive use of RAID technology in our applications which provides built in redundancy and provides the first level of resilience. We also use a secondary Storage Area Network (SAN) with data being backed up from the primary SAN on a nightly basis, providing a further level of backup and recovery. Data is also backed up weekly to physical tapes, securely transported and stored offsite by our hosting partner.

Incremental backups run nightly with full backups on a weekly basis. Backup processes are monitored and checked daily as part of our routine system administration checks.

Recovery time in the event of a failure would be dependent upon the nature of the problem that occurred. We believe that our existing data centre and infrastructure hosting provision with OVHcloud's UK data centres provides a highly resilient capability that completely minimises the risks associated with potential disasters or systems-related business continuity. With the levels of inbuilt redundancy and resilience on our infrastructure it's highly unlikely that a serious failure that would adversely affect service availability would occur.

In the unlikely event of the need to restore data, we will use reasonable endeavours to meet the target times below from receipt of a request to initiation of the restore process:

- Urgent requests – 2 hours
- Non urgent requests – next business day if the request is received before 17:30.

7. Data Management

StatMap is responsible for the ongoing update and maintenance of OS OpenData within all SaaS offerings. The Client or Customer organisation is responsible for maintaining their data. Schedule 2 defines the arrangements for data management.

8. Information Security

We place a very high importance on information security and have a comprehensive range of measures in place within the company and with our hosting partner, OVHcloud™

StatMap has a comprehensive Information Security policy which forms part of its employment terms and conditions – all staff acknowledge and sign this policy.

StatMap will ensure that appropriate steps are taken to protect, secure and control the information provided by the customer for processing.

With OVHcloud™, the range of security measures includes:

- High degree of physical security with security personnel on site on a 24/7 basis
