Faster progress through technology

High-level Architecture and Technical Design

Clarity, direction, and real-world impact

Who we are

We partner with ambitious leaders to cut through digital complexity and accelerate the UK's security, resilience and prosperity. Our teams design and integrate solutions that fit seamlessly into existing systems, turning strategy into measurable progress.

We blend strategy, technology, and change expertise to tackle complex challenges. Our specialists deliver actionable plans, robust architectures, and sustainable transformation across digital strategy, AI, and data governance.

Defence, government, and industry leaders trust us to deliver results that matter.

Our three principles

These principles guide what we do and how we work:

Force for Good

We empower our team, clients, and society by investing in people, supporting positive change, and championing national resilience and prosperity.

Deliver Excellence

We set the highest standards in everything we do. We think long-term, focus on what matters, and enable our team to deliver outstanding results for ambitious clients.

Empathy & Integrity

We listen to understand, challenge constructively, and always act with honesty and care, owning our decisions and doing what's right, even when it's hard.

High-level Architecture and Technical Design

We develop coherent, future-ready architectures that balance strategic ambition with real-world complexity.

Through structured analysis of requirements, risks and operating models, we define robust designs that enhance interoperability, governance and performance.

The result is a technically assured foundation that accelerates delivery and reduces uncertainty across programmes

Features

- Assessment of existing technology landscape, operating model and constraints
- Definition of design principles and architectural guardrails to guide solution
- Development of comprehensive high-level target architectures
- Evaluation of technology options across cloud, AI and ML

Benefits

- Clear architectural vision that reduces ambiguity and aligns delivery teams
- Improved coherence and interoperability across platforms, suppliers and systems
- Reduced risk of rework through identification of constraints and dependencies
- Stronger governance and control across complex estates
