Endpoint Management

Service description
Endpoint Management provides centralised management of customer-owned endpoints to support security, compliance and operational effectiveness across supported operating systems and device types.

Typical service inclusions

- Endpoint configuration and policy management
- Software deployment and update management
- Security baseline enforcement
- Asset visibility and status monitoring
- Support for device lifecycle activities (onboarding and decommissioning)

Deliverables

- Configured endpoint management policies
- Endpoint compliance and status reports
- Incident and exception notifications where applicable

Service characteristics

- Proactive, policy-driven service
- Supports remote and distributed environments
- Scalable based on number of endpoints
- Delivered using industry-standard tooling
