F8 Networks – Service Definition

Secure IT Asset Disposal & Data Destruction Services

Service Overview

F8 Networks provides secure IT asset disposal services ensuring the safe decommissioning, transport, and disposal of end-of-life IT equipment. The service delivers certified data destruction, full chain of custody, compliance reporting, and sustainable reuse or recycling aligned with UK government security and environmental standards.

G-Cloud Lot: Lot 3 – Cloud Support

Service Categories

Security Services; Ongoing Support.

Key Features

- Secure collection and documented chain of custody
- Asset inventory, tagging, and tracking
- Secure logistics and controlled transport
- Certified data destruction and compliance reporting
- Secure on-site decommissioning services
- Asset resale and value recovery
- ESG and sustainability reporting

Benefits

- Reduced risk of data loss or unauthorised access
- Clear audit trails for compliance
- Secure handling of sensitive IT equipment
- Improved sustainability through reuse and recycling
- Recovery of residual asset value

Service Constraints

The service requires access to in-scope sites and IT assets. Delivery timescales depend on asset volumes, locations, and security requirements. On-site services are delivered by prior agreement. Disposal and recycling activities are completed in line with regulatory and environmental obligations.

Support Levels

Standard (planned collections and reporting), Enhanced (priority scheduling and named service coordinator), and Premium (secure on-site decommissioning and Technical Account Manager). Pricing varies by asset volume and location.
