Innovate IT Ltd – Company Brief

Innovate IT Ltd is a cloud technology company dedicated to helping clients utilise modern information technology products by coupling applications with cloud services to secure, speed up and simplify cloud deployment and configuration. We continually develop innovative solutions for our customers, enabling them to work quicker, more flexibly and more securely.

We have a well-deserved reputation as an independent professional services company. Since company formation in 2003 we have supplied professional services to the private, public, finance and not-for-profit sectors. We have a proven track record of delivering high quality solutions and services across a broad suite of technologies to a broad scope of customers. By leveraging this heritage, we are capable of consistently delivering professional services and quality outcomes. Since 2017 we have been involved with many aspects of UK Central Government digital transformation strategy for several departments, primarily focussed on information security, identity and access management (IDAM), cloud security and infrastructure services.

Service Description

Our Customers

We have history of delivering to HM Government and understand the culture, frustrations, aspirations, and processes. We have been involved in large transformational projects, service architecture and support. Our customers trust us to deliver a value-added service that integrates with their own teams.

Service Description

Our Approach, and Consultancy Process

Over time, we have established a successful consultancy process that has enabled us to deliver a quality and tailored service for our customers, centred around clear and timely communication. Each stage of our process is bookended with a customer playback session to keep you fully informed. Our repeatable method for ensuring the project is centred around the customer. The stages of our approach are:

- **Discovery:** We take time to understand your business practices, how IT enables your workforce, your digital strategy for the future and make some initial proposals.
- **Analysis:** We pull together everything from the discovery phase and evaluate our initial proposals. As a truly independent service provider, we will consider your needs in line with all the products available on the market.
- **Design:** Our architects will design your solution, factoring in the current technology stack, the future requirements, budget and anything specific to the customer.
- **Implementation:** Our SMEs will implement your solution based on best practices. We are able to supply project delivery managers, and work with our customers' own delivery teams.
- **Support:** We can provide varying levels of support for our solutions depending on the customer's specific requirements.

Service Description

Innovate IT can provide you with a complete end-to-end service. We will help you create your information security strategy through workshops with stakeholders, security and application owners. We can help you with identity discovery, deliver proof of concepts (PoC), carry out migration planning and enterprise solution design through to SME implementation and support.
