Condatis Credential Gateway

Pricing and service information

protecting organisations, connecting people

Service Overview

The Condatis Credential Gateway © (CCG) is a decentralized identity platform that simplifies the orchestration of decentralized identity user journeys. The gateway is a system-neutral solution, providing verifiable credential capabilities in a common standards-based way, supporting easy integration with any verifiable credential or identity verification service provider without being locked in with a specific vendor.

Pricing Information

The Condatis Credential Gateway © (CCG) is a Software as a Service (SaaS) cloud-based platform.

The pricing consists of two components:

1. Subscription fee
2. Usage fee

The subscription fee is a fixed fee. The features and service provided will be defined in agreement of this fee.

The usage fee is a transactional fee based on verifiable exchanges. A verifiable exchange is either an issuance or a verification of a decentralized digital credential. Verifiable exchanges can be purchased in blocks with volume discounting available to ensure your costs are fair, understood, and consistent.

Please contact us to discuss your requirements, view a demonstration and to receive a personalised quote.
