Nintex K2 Cloud

Structure

Nintex K2 Cloud is licenced according to 2 factors: users and content.

Content

Content is measured through production forms and workflows deployed as per the table below:

Starter	Up to 5 workflows & 25 forms	Pilot K2 for your first simple application
Builder	Up to 25 workflows & 125 forms	Build multiple applications / 1 mid to complex case application
Premier	Up to 125 workflows & 600 forms	Scale across the business
Enterprise	Up to 1,000 workflows & 5,000 Forms	For a complete digital transformation

- A "Workflow" is a set of actions designed and published in the K2 Designer which include an automated or manual start with singular or multiple end points, and a "Production Workflow" is a Workflow designed and published into a production environment
- A "Form" is a form designed and published in the K2 Web Designer, and a "Production Form" is a Form designed and published into a production environment.

Users

Users are named and defined as a specified individual using the Nintex K2 Cloud service on behalf of the Subscriber for the Subscriber's internal business purposes.

Nintex K2 Cloud Pricing

Pricing is per user per month (with an entry level providing 100 users with full platform capability)

Plan	Starter	Builder	Premier	Enterprise
Production Environment	1	1	1	1
Non-production Environment	£	£	1	1
Standard Support Package	✓	✓	✓	✓

Organisations can scale to meet the needs of their business from the base platform cost, they can be added at any time during the term. Users can be added with volume discounting per transaction

	Starter	Builder	Premier	Enterprise
Per user per month price	£12.00	£18.00	£23.40	£30.50
Minimum starting price/year*	£14,400	£21,600	£28,080	£36,600

*Starter Package is for use with short term pilot

Additional Modules

Additional modules are available for Nintex K2 Cloud as per below

Module	Definition	Price
Limited "Occasional" Named Users	Available as an option for certain requirements such as student access, NHS e-noting and transient staff.	25% of user price at licensing thresholds
Anonymous User Licence	Allows direct or indirect interaction with the service by anonymous users who start or participate in an existing Production Workflow, submit a standalone Production Form, or run reports. Anonymous users may not be in Subscribers of Active Directory.	£1,500 per month
Production Environment	Provides an additional production environment in the K2 Cloud service, for use by up to the licensed number of Users (as defined above).	£900 per month
Non-Production Environment	Provides an additional non-production environment in the K2 Cloud service, for use by up to the licensed number of Users (as defined above).	£700 per month
VPN	K2 Cloud provides the ability to connect a customer's VPN to their K2 Cloud subscription.	£2,500 per month
OPDA (On-Premises Data Access)	Cloud to ground connectivity	20% of user licence value
Premier Support	24/5 Support	10% of annual subscription value

Platinum Support	24/7 Support	30% of annual subscription value
App Support	All K2 applications will be listed and reviewed by the K2 Application Maintenance team (health checks). All applications will be identified for either 'maintain, improve or rebuild' actions. The improvements and rebuilding will be undertaken by the Application Build teams.	Please see K2 cloud services - App support
Site Reliability		Please see K2 cloud services – site reliability

Nintex K2 Five

Structure

Nintex K2 Five is licenced according to 2 factors: users and content.

Content

Content is measured through production forms and workflows deployed as per the table below:

Builder	Up to 25 workflows & 125 forms	Build multiple applications / 1 mid to complex case application

Document Package	Annual Price
5	£3,565.12

Document Package

A configuration of actions that use a template, populates the template with data from a Customer's Salesforce Org, and generates one or more documents in Word, PowerPoint, Excel or PDF.

Document Package Executions

Document Package Executions are the initiations of a Document Package either User-Driven, manually by a User or Event-Driven, automatically by an even, designated by the Document Package author. Each Document Package Execution is counted against the allocation purchased by the Customer.

Event-Driven Document Package

An Event-Driven Document Package is a Document Package which is executed automatically upon the occurrence of an event.

Event-Driven Document Package Executions

Event-Driven Document Package Executions are the initiations of a Document Package automatically by an event designated by the Document Package author. Each Event-Driven Document Package Execution is counted against the allocation purchased by the Customer. That allocation is aggregated among all of Customer's Users and does not roll over at the end of a Subscription Term.
