Pricing information (Setup and Support)

All prices exclude VAT and expenses.

Our Linked Data Publishing rates depend on the levels of experience required – please see our **SFIA rate card** for details.

For guidance:

- An initial engagement involving scoping and modelling would typically require someone with a great deal of experience who is able to carry out such work most quickly and effectively; our daily rate for such a person is £950.00-£1500.00/day

- A customised registry presentation layer in addition to the standard data presentation would cost between £550.00 and £1500.00/day depending on the complexity

- Additional support activities would cost between £750.00 and £1200.00/day

- Annually we would generally expect a service refresh and renew activity in place for any deeper dependencies or client upgrade requirements. This may include any associated applications. This can be undertaken as a day rate activity and would cost between £550.00 and £1500.00/day depending on the complexity

- Each customer's instance of the service runs on dedicated and replicated hardware via Amazon Web Services. These hosting costs (AWS charges) are billed as expenses monthly in arrears with no mark-up

For an engagement lasting less than one calendar month we will invoice on completion of the work; for engagements lasting more than one calendar month we will invoice at monthly intervals for the work carried out to date.

In all cases we require our invoices to be paid within 30 days.
