Pricing Information

All prices exclude VAT.

The following prices assume a minimum contract term of 12 months. For contracts less than 12 months in duration a 5% surcharge applies.

Entry-level system

Setup charges

For the entry-level system the price for initial loading of the data is £1500.00, including provision of a basic Data API configuration and redirection from the web domain of the client's choosing.

Monthly charges

The monthly charge for the entry level system is £750/month. This provides for the storage of up to 10 million triples and bandwidth of 10Gb/month. If these limits need to be exceeded, then you will need to upgrade to the full platform.

Complete Fixed System

Setup charges

The price for the initial loading of the data is £2000.00. This includes the provision of a basic Data API configuration, and a minimally branded landing page, and redirection from the web domain of the client's choosing.

Monthly charges (full system)

The basic monthly fee for using the publishing platform is £1000/month. This provides for the storage of up to 60 million triples and bandwidth of 20Gb/month. We charge an extra £750/month for each additional 50 million triples, and an extra £200/month for each extra 10Gb/month.

Flexible System

The flexible system is intended to cater for a wide variety of customers with very different requirements. The pricing structure for this variant is therefore designed in a very modular fashion, to avoid penalising customers who want a specific combination of options by forcing them to pay for ones they don't want.

In particular, therefore, we treat the underlying hosting charges as **expenses**. We pay these hosting costs on the customer's behalf, and pass them on to the customer with no mark-up. This means that customers who don't need high performance servers underlying their system do not need to pay for them. It also supports customers who need short term scale-up of their infrastructure to cope with particular events.

CONNECTING DATA

Setup charges

The price for initial loading of the data is £2000.00, including provision of a basic Data API configuration and redirection from the web domain of the client's choosing. In addition, set-up charges may include (as expenses) reserved instance fees for any servers used.

Monthly charges

The monthly charge is £1600.00/month, plus any AWS charges as expenses. This does not include support charges for any major customisations, which will be charged via our support services.

Optional charges

Data conversion, data update automation, integration with existing workflows: these may require the use of components of our proprietary Data Management System for which we charge an annual licence fee of £10,000.00.

URI reverse proxy service: this has an associated set up cost of £8,000.00 and a monthly support cost of £1000.00, plus any additional AWS charges as expenses.

SPARQL endpoint: some specialist services supporting specialist users require an accessible SPARQL endpoint this has an associated setup cost of £10,000.00 setup and a monthly support cost of £1000.00

GraphQL endpoint: we offer a GraphQL endpoint option for exposing the data, this has an associated setup cost of £10,000.00 and a monthly support cost of £750.00

SAPI-NT data API endpoint: we often provide our SAPI-NT API endpoint to support application development, exposing this more widely is an additional option, the simplest approach has an associated setup cost of £5000.00 and a monthly support cost of £500.00. The typical approach has an associated setup cost of £10,000.00 and a monthly support cost of £500.00

Data Catalogue: we offer a specialised data catalogue extension to the platform; the typical approach has an associated setup cost of £25,000.00 and a monthly support cost of £3000.00

Very-High-Volume data store: we have extensive experience of more complex high volume data publication. To support this, we offer a very-high-volume data store extension (for 10billon or more triples) this has an associated setup cost of £50,000.00 and a monthly support cost of £2000.00

Data Explorer app: we offer tailored data explorer applications on top of the platform, a basic approach has an associated setup cost of £25000.00 setup and a monthly support cost of £1000.00, a more advanced approach would have a Rate Card based set-up and a monthly support cost of £1600.00

Geospatial indexing: we offer an additional Geospatial indexing option; this has an associated setup cost of £25,000.00 and a monthly support cost of £2000.00

Batch APIs: in some situations, a Batch API provides specialist access to the data, this has an associated setup cost of £25,000.00 and a monthly support cost of £1500.00

Advanced Server Log Analysis and regular reporting: If more advanced server log analysis and regular reporting is required, we off an additional option. this has an associated setup cost of £3000.00 and a monthly support cost of £750.00

Epimorphics
CONNECTING DATA

Typically, customers of this variant also use our associate support services where we can provide effort to configure the various options e.g. to carry out initial data modelling if necessary, to develop data conversion and update automation scripts, to provide custom data presentation layers and to provide additional support options.

Termination charges

There are no termination charges associated with the service. All client data will be securely deleted at the end of the contract term.

Payment terms

We will invoice you for the set-up costs on signature of contract. We will invoice you for the use of the service monthly in arrears, with the first invoice being issued when the system goes live.

We expect payment of our invoices within 30 days.
