

Managed Security Services Provider (MSSP)

**Security Operations Centre (SOC) &
Security Incident and Event
Management (SIEM)**

With competing demands on budget and resources, more and more organisations are opting to outsource key security monitoring services to a Managed Security Service Provider (MSSP). Whether for log management, managed detection and response (MDR), SIEM-as-a-Service, or compliance management, organisations large and small are turning to MSSPs such as IntaForensics, to deliver these solutions quickly and cost-effectively.

Now is the time to adjust your security strategy — before your perimeter defences are no longer effective against cyber-attacks. Beyond prevention, you need swift breach detection and remediation to minimise the time criminals spend in your environment and the harm they can cause.

As a leading Managed Security Services Provider (MSSP), IntaForensics in partnership with AlienVault, not only offers monitoring and detection services from its advanced SOC but around-the-clock rapid response and remediation services. Backed by the leading ISO/IEC 17025 accredited provider of digital forensic services to Law Enforcement and Government Agencies, PCI SSC Accredited Qualified Security Assessor (QSA) and Accredited Payment Card PCI Forensic Investigator (PFI). IntaForensics Cyber specialists will help you tailor your AlienVault USM Anywhere™ implementation to support your key business initiatives.

AlienVault®

AlienVault® is a network security system that gives you everything you need to quickly identify cyber threats and manage compliance. This intelligent security platform can be tailored to meet the IT requirements for any business, from small businesses to large enterprises, who require the ability to quickly respond to a cyber threat in order to reduce downtime and get their systems and processes restored in a timely manner.

The AlienVault® Unified Security Management™ (USM) platform provides five essential security capabilities in a single console combined with integrated threat intelligence, giving you everything you need to quickly identify threats and manage compliance.

Key Advantages of using IntaForensics as your MSSP

Breach Detection

Actively searching for threats is important for keeping your business safe. To find threats, you need a team that monitors and manages your environment 24x7x365, using advanced technology and analytics.

Minimising Data Breach Window

The most precious resource for a threat is time. Your security strategy must include an approach to closing the breach window as quickly as possible — to minimise exposure, reputational damage and cost.

Threat Remediation

Traditional managed service providers simply notify you of a breach, leaving it up to you to respond. But we act on security events immediately, on your behalf, based on pre-approved actions and supported by our ISO/IEC 17025 digital forensic laboratory.

Reducing Total Cost of Ownership (TCO)

Maintaining a fully staffed, around-the-clock security team can be expensive. By turning to a MSSP, with the resources and experience to detect and respond to security events on your behalf, you can help ensure your environment's security while reducing your TCO.
