- Software Support
- Cloud Migration, AWS, Azure & GCP

Service benefits

- Increased velocity
- Improved team Alignment
- Delivery Assurance
- Improved time to market for new products
- Support from Senior Engagement Manager

Our Approach

OB Collective will provide dedicated Principal consultant who will be involved in the detailed planning phase, this includes understanding the domain and architecture, scoping and shaping of the project and team, building a back log. We do this by ensuring we are engaged with the relevant stakeholders from both the business and technology

Once the Project starts the Principal Consultant will deliver the project whilst having oversight and management of the team.

We ensure we deliver the project in tandem with your organisation by aligning with your principals and agreeing upon Key Deliverables, monitoring them with Monthly Service reviews
