*Special offer Pricing for GCLOUD clients on orders before 30 September 2025

IBM Robotic Process Automation as a Service Platform delivers a hosted cloud environment with enabling client software that enables organizations to build, manage and run robotic process automation (RPA) solutions.

The platform can be used to schedule unattended bots to automate tasks without having to rely on any human intervention, and by users to trigger attended bots to help them complete their tasks. A low code authoring environment is used to develop bots which are stored in a secure repository.

A web-based user interface is used to manage the cloud-environment including bot scheduling and workload management capabilities. Bot credentials can be stored securely for both attended and unattended bots.

The IBM Robotic Process Automation as a Service Platform includes the following entitlements:

- 1 x IBM Robotic Process Automation as a Service Environment
- Unlimited use of IBM Robotic Process Automation as a Service Studio
- 2 x IBM Robotic Process Automation as a Service Attended Bot Agent
- 1 x IBM Robotic Process Automation as a Service Unattended Bot Agent
