## IBM MQ on Cloud Pricing

\*Special offer Pricing for G CLOUD clients on orders before 30 September 2025

### Cloud Service

#### IBM MQ on Cloud

IBM MQ is messaging middleware that helps the integration of diverse applications and business data across multiple platforms, using message queues to facilitate the exchanges of information. The IBM MQ on Cloud service enables the Client to access IBM MQ functionality as a hosted cloud offering. IBM MQ on Cloud handles upgrades, patches, and many of the infrastructure tasks on Client's behalf, so the Client can focus on integrating its applications.

IBM Cloud, IBM's open standards cloud platform for building, running, and managing apps and services, is a technical pre-requisite for the Cloud Service. At the time of provisioning, Client must have an IBM Cloud account. New users can register for access via the online registration form: <https://cloud.ibm.com/registration>.

- Processor Value Unit (For Cloud software)**

IBM charges per Processor Value Unit (PVU) for certain of its software. A Processor Value Unit (PVU) is a unit of measure by which the Program can be licensed. The number of PVU entitlements required is based on the processor technology (defined within the PVU Tables below by Processor Vendor, Brand, Type and Model Number) and by the number of processors made available to the Program. IBM defines a processor, for the purpose of PVU-based licensing, to be each processor core on a chip (socket). A dual-core processor chip, for example, has two processor cores. Tables are listed here: [IBM Processor Value Unit \[PVU\] licensing for Distributed Software](#)
