## Kubernetes & Cloud Native Computing Experts

LiveWyer are a delivery focused Cloud Native consultancy company, passionate about the services and technology we deploy. Our expertise encompasses Enterprise Architecture, Kubernetes Solutions implementation using Infrastructure as Code (IaC), and Agile DevOps Delivery. We leverage cutting-edge cloud and AI technologies while working with our customers to ensure SOC 2 and ISO compliance.

We pride ourselves on earning trust and delivering value through partnerships with our customers. Our DevOps methodology centres around our engineers embedding within our customer's teams to develop an in-depth understanding of your culture, working process and targets. So whether you need help with a short-term target or long-term transformation you can be confident we're working towards the same goals to help you succeed. Customers we have helped include Siemens, Ericsson, Smart Pension, The National Archives, Comic Relief, Skyscanner, Camelot Group and Sage Pay.

At LiveWyer we tailor our solutions to meet our customer's business and commercial requirements, providing reliable professional services and access to the latest innovations in IT. We deliver small pods of engineers to deliver maximum impact and value.

Founded in 2012, LiveWyer is a privately owned London-based IT Infrastructure company with over 100 years of collective infrastructure experience.

## DevOps Engineering

### Service Description

Our extensive infrastructure experience enables us to help you optimise your company's web operations. Through benchmarking, refinement and training we work closely with your business to improve performance, increase service availability and reduce costs.

### Service Features

- Help your business migrate to a DevOps culture and tool-chain
- Enable infrastructure and process automation to accelerate your workflow
- Deploy self-services tools to increase development velocity
- Embed testing at the centre of your application lifecycle
- Unlock business data from your Development and Operations teams

### Service Benefits

- Enable rapid infrastructure and application deployment
- Increase collaboration within your business
- Achieve a competitive advantage through faster delivery cycles
- Further training and support available
