

CYBER RISK ASSESSMENT

A workshop led by CND Experts to identify all the cybersecurity risks within your organisation.

SERVICE OVERVIEW

The Cyber Risk Assessment is where our experts work with you to understand what information security threats you may be facing, what cyber security measures you may already have in place to mitigate those threats (risks), and what more could be done to reduce the risk. This latter stage is what is known as the capability gap.

During the workshop, we will discuss ways to explore any issues found in greater detail or propose and prioritise any further actions required to close the gap.

DELIVERABLES

1. An intimate and consultative workshop.
2. A report detailing the priority of the various risks.
3. Recommendations on what actions should be taken to remediate the identified risks or to investigate them further.

SERVICE DETAILS

The Cyber Risk Assessment is designed to help you bridge the gap between your current cyber security position and where you need to get to in order to mitigate or manage your cyber security risks.

The Cyber Risk Assessment is often our starting point for a number of our services such as the [Virtual Chief Information Security Officer \(vCISO\)](#) service, as it enables us to rapidly immerse ourselves in how you operate and identify any risks that you may have. Although, the Cyber Risk Assessment can equally stand alone in its own right.

The Cyber Risk Assessment is a workshop, led by a CND cyber security Principal Consultant and attended by your stakeholders and technical staff. Within the workshop, we discuss a multitude of cyber security controls from a number of popular frameworks. The day is spent delving into numerous topics including, [Security Architecture](#), [System Hardening](#), and [Insider Threat Prevention](#), with our experts offering advice and clarification. The ensuing discussion will assess if and how those risks are being managed and the impact any residual risk may have on the business. Our experts will guide you through any questions and offer advice and clarification during the workshop.

PRICING

Price for the cyber risk assessment workshop - £1,800
