

# MANAGED CYBER EDUCATION SERVICE

Creating a human firewall ensures the security of your organisation's digital information

## SERVICE OVERVIEW

Creating a risk-aware security culture ensures that your employees are aware of the cyber threats and how to respond to the ones seen in the real-world.

With our Phishing Assessments, we send a realistic phishing email, but instead of it being malicious, victims are educated on what they could have done to identify the phishing email.

The training campaigns are set up to supplement the phishing assessments, and these can be tailored to your organisation's requirements.

## DELIVERABLES

1. Up to 8 phishing scenarios sent to staff members with industry benchmarking over a 12-month period.
2. Quarterly training campaigns in various formats.
3. Customised reports for both phishing scenarios and training campaigns.

## SERVICE DETAILS

When we conduct a phishing assessment, we send a very realistic phishing email to groups of employees to see how many fall for the ruse.

Our consultants will discuss your concerns around phishing and suggest some objectives to educate staff about this topic and other associated areas, the output is a campaign to not only assess the likelihood of staff falling victim to phishing but more importantly to educate them about phishing techniques and how they can identify and thwart an attack.

To supplement the education provided by the phishing assessment, we also run quarterly training campaigns which are delivered in a number of different formats, including but not limited to interactive modules, videos, games, and newsletters.

## PRICING

The price for this service is determined by undertaking a detailed scoping call or meeting to discuss your requirements and will depend on the number of users and length of subscription.

The Managed Service offering will vary in price depending on number of users, full demos can be provided by the vendor upon request.
