We take your digital strategy and...

Advise you how to execute it

Deliver it alongside your organisation

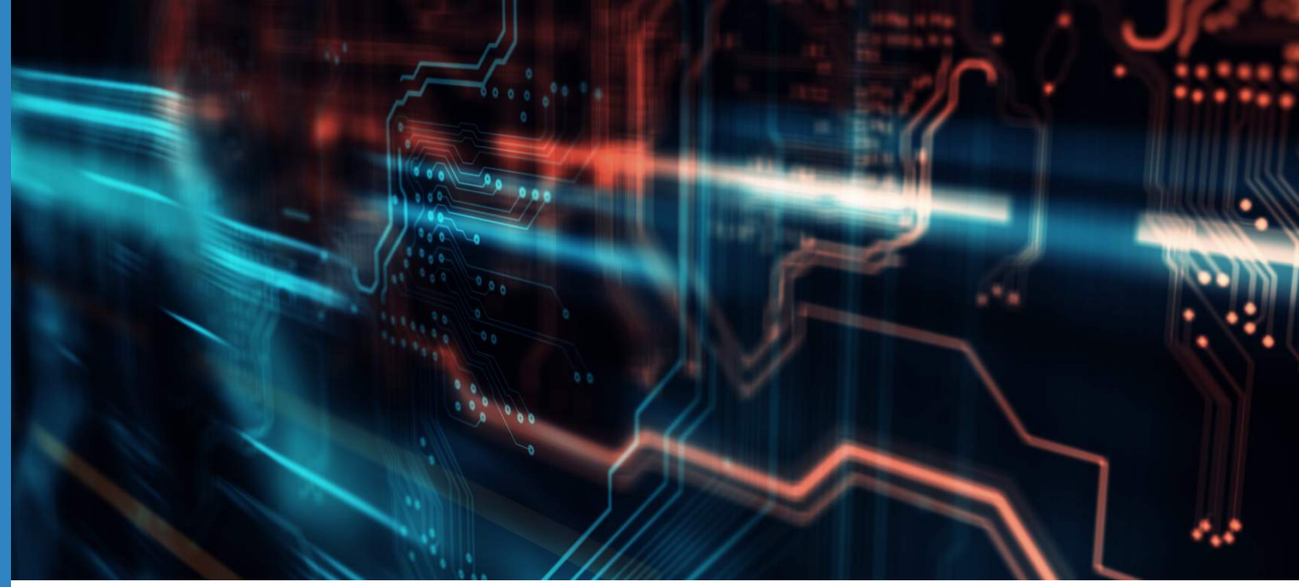
Run it for you

Once a vision is in place, we set our people and clients up with the technology and processes which help them fly.

About Integrella

Integrella is a digital integration specialist with decades of expertise in designing, implementing, and supporting integration systems for our clients across:

- Financial Services
- Public Sector
- Healthcare
- Education
- Retail



Our consultants are highly trained in all the latest technologies and we partner with **leading suppliers** in the industry, to deliver the best results:

Google

Rhapsody

InterSystems
Health | Business | Government

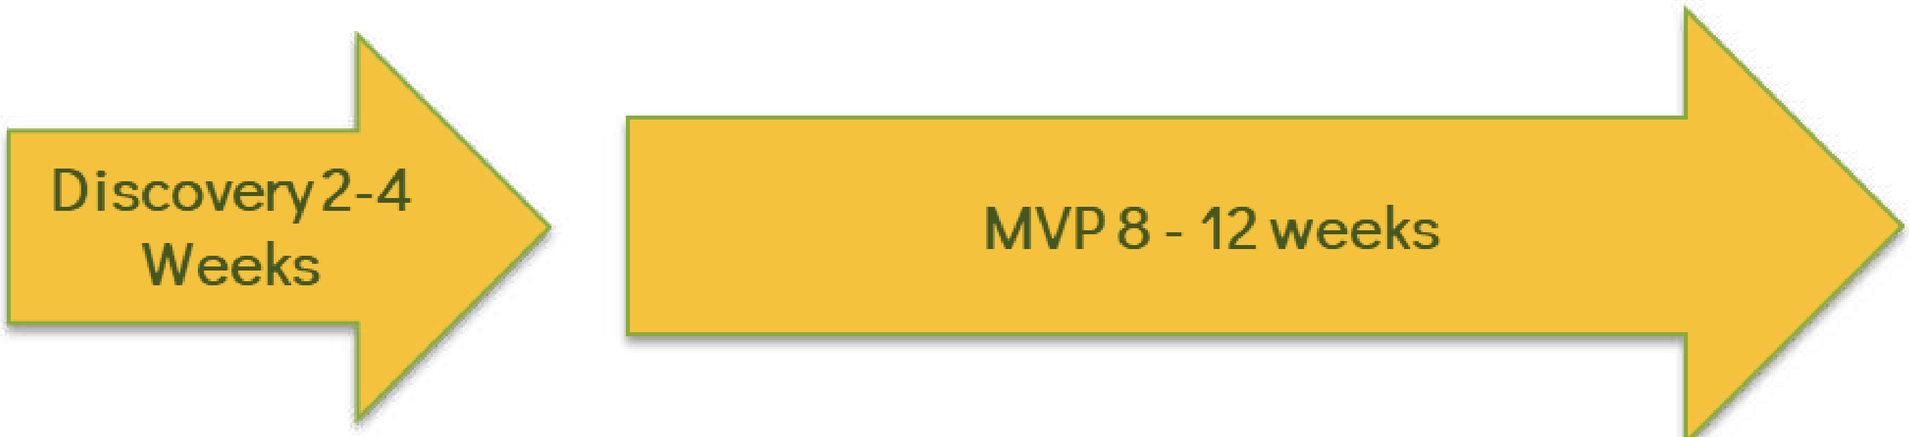
MuleSoft

ORACLE

Microsoft Azure

We guarantee results in weeks - not months

- Typically a 2-4 week Discovery followed by a 8-12 week MVP.
- We can normally stand up teams in 4 weeks.
- Client can embed resources into Integrella team.



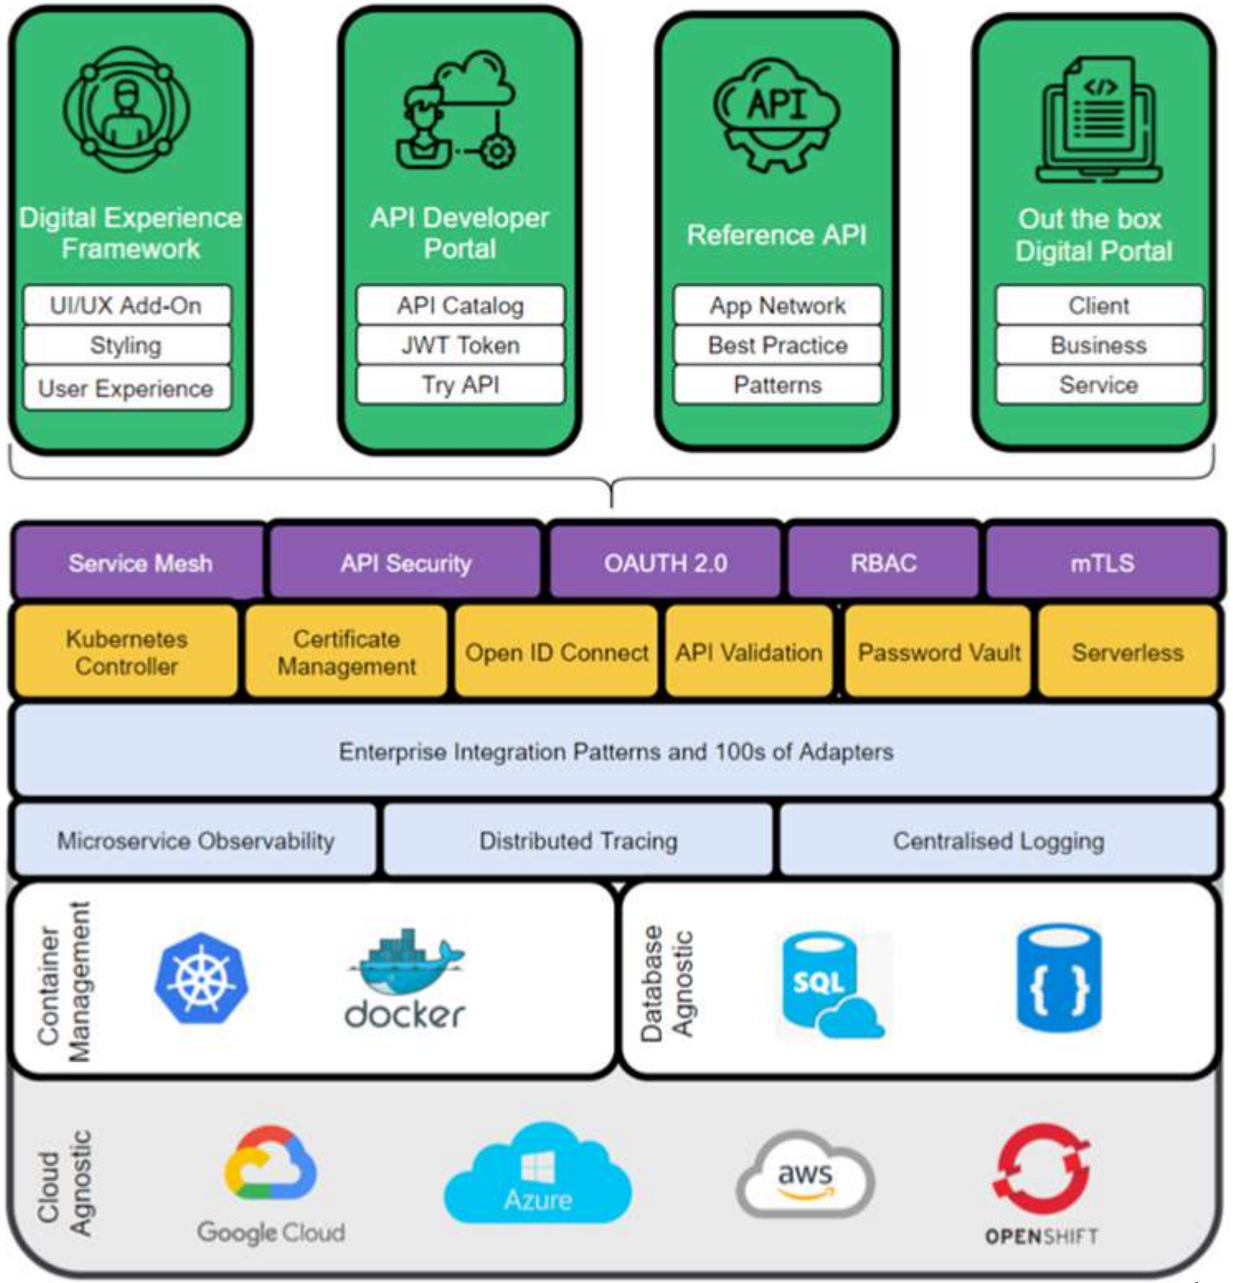
Business Value Realised

Digital Innovation Platform

We have a ready made Digital Innovation Platform (DIP) which can be used to build, secure and manage Apps, APIs and Microservices in a cloud-agnostic environment.

We provide this free to use to our clients to accelerate adoption of cloud technology and speed up time to value for applications and integrations.

Find out more about the DIP here.



Our Services

We have everything you need to accelerate your digital transformation across people, process and technology. Including an expert global team, agile operating models and accelerators, and our own digital platform..

Data Sharing & Integration

Getting secure, reliable access to data is often the hardest part of digital transformation.

It involves taking the data trapped in your existing systems and serving it up to developers and partners in a user friendly, secure, reliable, scalable way – essential if you want to build an agile organisation.

The benefits of working with us

- We help you take control of your data, which leads to empowered developers who can build innovations quickly since their hands are no longer tied by legacy systems and processes.
- We have strong technical and functional expertise and work with you to shape delivery mechanics.
- We'll deliver change with the required command and control – keeping a close eye on delivery and target business outcomes.
- Our methodology has been tried and tested over time by our consultants working with customers across industries.
- Our multi-disciplinary team deliver across most of the popular enterprise platforms.

Why we're different

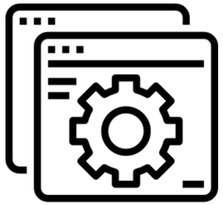
- We bridge the skillset gap with our deep understanding of all the latest software. Our staff have been through a boot camp of training, to ensure everyone is top of their game.
- We have built our own digital innovation platform that can be leveraged to do data sharing and encompasses all the key building blocks in a modern integration solution, including microservices, APIs, cloud native and enterprise integration patterns.

What we do

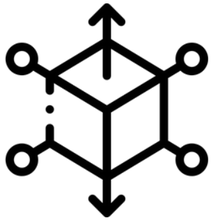
API Integration

Digital integration

Enterprise integration



Extract, transform and load



Cyber security for data and APIs

We work with the leading vendor-based integration technologies:

InterSystems® Implementation Partner

MuleSoft®

ORACLE®

Red Hat

Rhapsody

Case Study

West Middlesex University Hospital NHS Trust (now part of Chelsea and Westminster Hospital NHS Foundation Trust) based in West London.

West Middlesex was reliant on point-to-point interfaces hosted by multiple software vendors to connect their IT systems directly to each other. This approach was creating unnecessary complexity, increased cost of support and maintenance, high risk of failure and an over-reliance on third parties to make changes.

To solve this issue, Integrella put forward a set of services and solutions which included Long-Term Support, as well as a fixed price-list for interfaces.

Find out more here.

Application Development

We develop bespoke software for modern tech companies and enterprise clients across the public and private sectors.

Focusing on analysis and due diligence backed up by over 10 years of experience within the enterprise integration field, we'll identify business problems followed up by provision of recommendations that address those problems and drive tangible business value.

The benefits of working with us

- We guide you to choose the right tech to solve your issue.
- We don't believe in quick fixes – we will implement solutions that are sustainable and for the long-term.
- We provide support and maintenance.
- There are multiple people building your app, meaning our solution has a well-rounded output.

Why we're different

- We bridge the skillset gap with our deep understanding of all the latest software. Our staff have been through a boot camp of training, to ensure everyone is top of their game.
- Typically, we can scale up a fully functioning app dev team of 5-7 within 4-6 weeks.
- We have a set of frameworks in place to adapt for your needs.
- We change your existing architectures, making it perform optimally and efficiently.

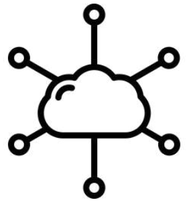
What we do

Concept development

Application security

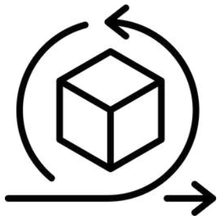
Platform development

IOT solutions



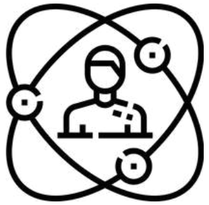
Bespoke product development

Agile software delivery



DevOps

Digital platform setup



Onshore and offshore delivery

We are experts in Open Source technology:

API
Application Programming Interface

C#

Google Code-in

Java

Microsoft® .NET

MySQL

node JS

React

PostgreSQL

TS

Case Study

Integrella supported Twig Education to enhance their eLearning delivery and feature capability, with a goal of ensuring continued expansion across the US & school districts.

To drive their technical developments, Integrella deployed a dedicated Agile team of digital experts to expedite cutting-edge, innovative feature developments and workflows. As of 2021, we have:

- Improved development and delivery speed
- Made smart estimates to capture maximum tasks on Sprint
- Improved capability across Twig by providing full stack developers
- Been involved in R&D work

Find out more about the project here.

"The Integrella team quickly integrated into our team, they understood our architecture, digital/cloud technologies and agile methodology. Most importantly they had the right can-do culture which made them an excellent fit for Twig. Twig has recently been purchased by Weld North (now Imagine Learning) and has ambitious plans for the future which Integrella will play a large part in by assisting us to help scale out our Agile teams to deliver it."

– Alan Barrow, CIO, Twig Education

Cloud

We are cloud specialists and work with clients to transition their workloads to cloud and re-engineer their legacy apps to modern cloud native architectures.

Migrating to cloud enables businesses to access and share data quickly, scale on demand and utility-based pricing.

The benefits of working with us

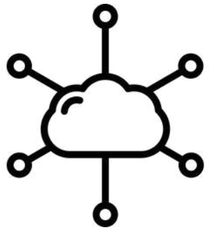
- We work with you to prepare and implement a cloud strategy.
- We transition your vendor management systems and resources to the Cloud.
- We guide you in maximising your investment in Cloud to reap the full benefits.
- We'll help you become cloud-agnostic, meaning all your tools and processes will be compatible with any cloud infrastructure without any operational issues.
- We offer our services in three areas of cloud computing: cloud strategy, cloud architecture, cloud migration.

Why we're different

- We run and manage your cloud service for you
- Our multi-disciplinary team allows you to fully leverage the benefits of DevOps
- We are certified developers and administrators in Microsoft Azure, Google Cloud Platform, Amazon Web Services and Cloud Native Computing Foundation.

What we do

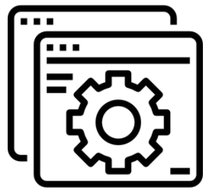
Cloud strategy implementation



Migration of workloads

Application refactoring

Implementation of on-premise apps



Cyber review recommendations

Business case with cloud assessment

We are experts in the leading Cloud technologies:

aws

Google Cloud

Microsoft Azure

Case Study

Standard Bank Jersey are a part of Standard Bank Wealth International and have been running for over 40 years. SBJ's mission is to help clients preserve and maximise their wealth, using an integrated, flexible system.

SBJ were seeking a partner to help them migrate from their aging legacy software platform. They had been partnered with an on-site sibling organisation at ICBCS for hosting their hardware, which made them reliant on them for maintenance and support work. In turn, this slowed down their ability to scale up and process data efficiently.

Integrella were introduced to migrate SBJ to the cloud, to increase agility and bring them in line with modern processes.

Find out more here.

Data Science

We break down your big data into smaller, more usable information.

By creating software and algorithms to help our clients, we help determine optimal operations for your business.

The benefits of working with us

- We ingest structured and unstructured data and process that data to gain insights that help businesses make better decisions.
- We train algorithms to automate processes through machine learning, for example a chatbot to automate customer interaction.
- We evaluate your current systems and processes and see what needs improvement.
- We provide you with a tailored digital strategy and enterprise model support to meet business objectives.
- We implement high and low level data design.
- We can implement data science across different disciplines.

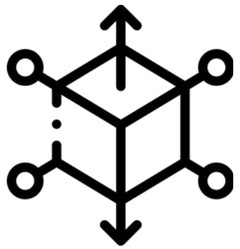
We are experts in

- Big Data
- Artificial Intelligence Modelling
- Data Visualisation
- Block Chain

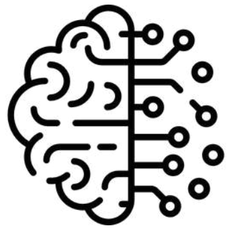
What we do

Big data

Blockchain



Artificial intelligence



Data visualisation
