

Microsoft Fabric Implementation and Support Services

Our highly experienced and Fabric-qualified experts support your setup and rollout of Microsoft Fabric across your organisation, from proof-of-concept / pilot to enterprise-wide deployment. We can also provide user training for Fabric, and a health check of your existing deployment covering both configuration and management / DevOps.

Microsoft Purview Implementation and Support Services

Our teams of data governance and technical experts support your setup and rollout of Microsoft Purview across your organisation. We support your configuration of data sources, data classification and labelling, lineage and data quality rules. We can also provide user training for Purview, and a health check of your deployment.

Data Architecture and Data Engineering Support

Our team of expert data architects and engineers design, build and support data platforms. Our data architecture and engineering support services makes these experts available to organisations on an as-required or ongoing part-time basis, supplementing and supporting your in-house data team with additional expertise and capacity.

Data Literacy Training and Support

Our data literacy training and support services empower your staff and other stakeholders with the skills to understand, interpret, and use data effectively. We provide tailored curriculum development and the development of role-specific training, delivered in a variety of formats, from in-person to e-learning.

Data Strategy Support

Our data strategy support services allow you to align ongoing or planned technical initiatives to an overarching data strategy, ensuring that effective data management and exploitation is being delivered alongside technology updates. This includes creation or periodic review of your medium-term data initiatives roadmap.

Data Management and Data Governance Support

Our data management and governance support services help ensure that your data is accurate, secure, and well-governed. This includes establishing and supporting implementation of your data governance framework, investigating and designing solutions for data quality issues, and ensuring compliance with relevant data management policies.

Data Maturity Assessment

Our data maturity assessment gives organisations a snapshot of their current data maturity level across the 12 dimensions in our proprietary data model, which has been used across Policing and other parts of the public sector. Annual reassessments measure progress towards target maturity levels associated with organisational objectives.
