ORIENTATED ARCHITECTURE APPLICATIONS 

Us Clients with

OUR CLIENTS & PARTNERS

• Implementation Plan

Every project is different, yet typical stages we deliver include based on the model of onsite, offshore and hybrid models:

- Project Initiation: includes - scoping; detailed plan development; governance arrangements; quality standards development; sign-off arrangements;
- Discovery: typically includes tasks such as - stakeholder engagement and consultation; risk assessment and mitigation; gap analyses and options appraisal;
- Delivery: typically includes testing and training activity, as well as delivery of core tasks
- Project Closure: typically includes: 'business as usual' planning; review and sign-off; formal project closure

• Ordering and invoicing process

The ordering process is as follows:

- We send the client a proposal for their approval
- Once the client has accepted the proposal they send us a Purchase Order
- Depending on the duration of the contract, we either invoice in advanced, or in phases

• Service constraints

Since we offer a bespoke service, service constraints are discussed with each client on an individual basis

• Failure to meet service levels

In the unlikely event we fail to meet agreed service levels, we would take the following steps:

- Review the concern and deliver re-work if appropriate
- Seek to negotiate a resolution or compromise
- In the absence of resolution we will seek independent arbitration

• Contract termination

Contracts can be terminated by either party by providing written notice based on the contracts or supplier agreements.
