

Getting started with delivering agile projects

G-Cloud 14

Service Description

Agile is an alternative to the traditional waterfall project management approach. We know that cloud-based projects are frequently delivered using an Agile approach and that Agile Delivery Teams need the foundational skills to work in this way.

This is half training and half springing into action – learn enough theory to get going and quickly develop an iterative learn-by-doing approach to project delivery.

Participants leave with their first agile sprint planned and start delivering it the day after our session. We find this is a highly effective way for your project team to immediately experience agile and understand how to deliver improvements.

As our Trainers have real-life experience of delivering Agile projects across the public sector, we are able to help them define, plan and teach them the skills and knowledge to immediately start adopting an agile approach.

Introduction to Basis Ltd

We help public services tackle messy problems. We pioneered the use of Agile as a means of transforming services in the public sector. In the last 10 years, we've helped hundreds of services to improve outcomes for real people, quickly.

Our services have a wide range of applications for cloud-based services. We help our customers to understand service user needs, to design services that meet those needs using an Agile approach, and to support teams and leaders to embed those services beyond our intervention.

We recognise that many public services, particularly in health and social care, continue to require personal interactions, as not all service needs can be met through digital solutions. We help customers to design coherent, end-to-end services that encompass both the physical and digital components.

Effective 'click and mortar' public services meet the needs of the many and not just the few. These public services promote the adoption of cloud-based services; a small amount of support during early interactions can empower service users to transact online in future.

Online delivery and facilitation

All of our services can be provided in person, or online; we are experts in virtual facilitation. Since the beginning of the pandemic we have:

- Facilitated over 10 online Impact Sprints with social impact organisations and local authorities to understand the impact of COVID-19 on their communities and coordinate their response quickly
- Supported people and organisations to turn their events and training into online engagement ranging from – REN21 a Think Tank focussed on global renewable energy policy, Stockholm School of Economics EMBA programme, a coaching programme in Virginia (US), and youth engagement for Generations for Peace (Amman, Jordan)
- Designed and facilitated a global conference for the Alliance for Child Protection in Humanitarian Action attended by over 500 delegates
- Built the capacity of teams in local government, UNESCO, Unicef and the UN Disarmament Directorate to run virtual events with international participation

Our peers and clients have recognised our approach and results. For six years running (2019-2024) we have been identified as a [leading](#)

[management consultancy working in the Public and Social Sector by the Financial Times.](#)

Description

Cloud-based projects are frequently delivered using an Agile approach and team members need the foundational skills in project management to deliver them effectively. This is half training and half springing into action – learn enough theory to get going and quickly develop an iterative learn-by-doing cycle.

Features

- 1 full day in-person or 2x half-day online training course
- Overview of agile for services and learn when to use (and not use) Agile using a mix of exercises, examples and theory
- Overview of waterfall methods so participants understand the key differences and when to apply each in different contexts
- Public Sector examples to demonstrate how you can use agile which is key when planning your own
- Adopting Agile - participants learn how to adopt an agile approach for their project or how they can accelerate the pace of their project using agile
- Foundational project management skills that participants can start applying regardless of their operating environment
- Personal and team development

Benefits

- Experience the practical application of agile on your project (not just theory)
- Understand when to apply agile and when to apply a waterfall approach
- Public sector case studies – beyond software development
- Cloud-based project acceleration
- Delegates leave the programme having 'tried out' the approach
