Managed Detection and
Response

For G-Cloud 14

Managed Detection and Response

The pricing for the service is done in two parts.

The first part is priced on a per-user per-month basis. There is a minimum monthly cost for this part of £400. The price per-user is priced on request depending on requirements and will be agreed following a scoping call.

The second part is the price for hosting which is based on the number of logs ingested into the SIEM. During our scoping call, we will provide and estimate on what the expected monthly cost would be. This will then fluctuate depending on usage.
