Project Management

G-Cloud 14

G-Cloud 14 Service Description

Project Management

Our Project Management solution delivers project satisfaction to our customers capturing their business requirements and enhancing their capability. We manage projects to PRINCE II and Agile methodologies. We ensure stakeholders are fully engaged within the project and are included in the project governance.

The service includes:

- Workshop the requirements with the business.
- Defining the project scope.
- Developing the business case.
- Mapping and managing stakeholders.
- Developing the project plan.
- Working the methodology that suits the project.
- Developing the implementation strategy.
- Management of gateway reviews / Sprints and Scrums.
- Providing ongoing quality assurance.
- Maintaining full governance throughout.
- Delivery of controlled implementation.
- Provision of Post Go Live Support and ongoing Service Management.

We have managed a variety of projects and have therefore developed a series of best approaches enabling us to easily determine what will work for a project in certain.
environments/sectors. This is a result of our detailed and substantial lessons learnt log.
Whether it be waterfall or Agile we ensure there are clear deliverables, and all parties are clear on their required outcomes. Our open and collaborative approach ensures that we manage these deliverables efficiently.

When managing any project, we follow a lean process and can therefore minimise wastage whilst ensuring that the project always remains on the critical path.

Our technical expertise coupled with our previous experiences enables us to manage all aspects of the project from conception to closure. Our approach is scalable up and down as required, which de-risks the project for the customer and ensures that the resultant technical solution meets their requirements in full.
