

lean data for maximum impact

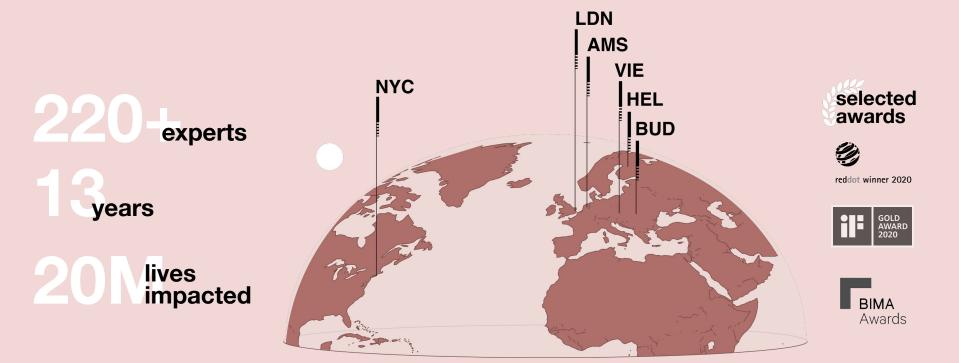

data engineering & analytics from Supercharge

we are Supercharge

Supercharge is one of the fastest-growing digital agencies in Europe. Our international experts are united in the pursuit of discovering and building better futures. We work in close-knit, multifunctional teams to make sure your product innovation will be a success. We measure our impact through lives that our products have enriched through technology.

Strategy

We translate your bold vision into a pragmatic product and tech strategy to de-risk innovation and maximize ROI for both your users and your business.

• digital strategy • product discovery • tech strategy • data & Al strategy

Product Design

We leverage behavioural science to craft simple and enchanting journeys to empower users. Our designers work in perfect sync with engineering to ensure feasibility.

• UX design • user testing • branding • product growth

Software Engineering

Our top-tier engineering team realizes your product with clockwork precision. Scalability and robustness meets with speed and agility for unparalleled efficiency.

• mobile apps • web applications • IoT applications • backend microservices

Data and AI Engineering

We rapidly turn raw data into business results. Our experts go beyond traditional data processing with advanced AI to build your next edge. • generative AI & LLMs • Machine Learning • automation • BI Apps • Product Analytics

Managed Services

We support you throughout the entire product lifecycle, ensuring robust performance and customer experience 24/7.

• L1, L2, L3 support • product maintenance • cloud infrastructure & cost optimisation • devops

swift business impact through competence & efficiency

data is only as valuable as how much business impact it can drive for you

We fit data into your business' big picture

Data is a key piece, but not the only piece. We are an end-to-end innovation partner.

Supercharge's services bring your innovation from **strategy to implementation** with our continuous support for further growth. Data is one of the most important pieces of the puzzle, but real impact is created when we funnel

data insights back into your digital strategy, every-day decision making process and product ecosystem.

We deliver impact

We help you leverage data with laser focus on tangible business benefits.

We make sure to solve the right thing for you: we define business problems with clarity and **focus on what matters.**

Supercharge takes an integrated view of you data & analytics domain, eliminating unnecessary data-silos, organizing data to be fit for purpose, creating tangible impact for your business.

We focus on lean value creation

We de-risk data innovation through a lean approach coupled with world-class data & analytics expertise

With using our discovery framework we are able to assess risks in early stage via knowing your data maturity, progressing in **small iterations** hand-in-hand with your stakeholders - **creating value at every stage** before scaling up to production.

we pick the right target to make a real difference for your business

We start every data project by understanding what metrics really propel your business. Where can leveraging data create the most value for your organization? Every further stage will focus on impacting this metric to create tangible benefits.

Gergo — Head of Data & Analytics Pota

Gergő is the driving force behind our data analytics team. He has 12+ years of experience in the field of data, leading data teams and delivering BI and ML driven advanced analytics projects that created massive business benefits. Gergo brings lean product development principles to world of data: practical solutions that deliver the most bang for your bucks with smartly selected targets and iterative growth cycles. He excels at finding the optimal solution for business problems with the leanest possible approach - defining use cases with high expected ROI and finding the way to reach them quickly with providing insights from analysing transactional data to user analytics.

Director of Data

selected former projects and experience

airline industry

- revenue, financial, operational reporting
- └─ introduction of self-service BI
- L building ML driven ticket and ancillary pricing systems
- L business owner of certain revenue streams

finance

∟

- tech leading financial reporting remediation project including GL reporting, balance sheet, statutory reporting
- technical lead of accounting system change related Bl & DWH remediation project

energy

- experience in leading a multi-region BI team
- working on manufacturing and supply chain reporting
- delivered a massive project related to BI remediation (from DWH to Reporting layer)

telecom

- L Enterprise data warehouse development
- ETL automation
- L ITIL based automated reporting
- server farm utilization forecast modeling

selected experience

protecting homeowners with IoT innovation

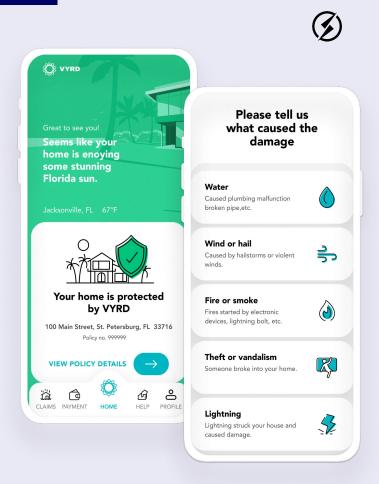

The Florida homeowners insurance market is notoriously difficult for carriers to service. High incidents of fraud and high operating costs have stifled business - causing property insurance companies cancel policies, leave the state, and liquidate at an increasing pace. We partnered with SiriusPoint and Bolttech to launch VYRD - the first Florida-domiciled Property and Casualty insurer licensed in the state in over 3 years. Our rapid delivery created a desperately needed option for Florida residents who have experienced increasing cost and decreasing choice for protecting their homes.

Designed and implemented a **modern data platform in Google Cloud** using serverless services to have a scalable, secure, centralized data foundation.

Built a centralized data

warehouse to clean and combine data sources (policy admin, claims, IoT sensor, web experience) that automates KPI reporting and enables contextual customer communications.

We streamlined their marketing operations by integrating a marketing platform with their data warehouse and ingested a custom-defined customer segmentation into the system.

gategroup data-driven operations transformation

GateRetail embarked on a journey to transform their retail and supply chain operations with a data-driven approach. The project's goal is to create real impact by funneling back data insights into the everyday decision-making process to improve revenue, operations, and business forecasting. Besides setting the direction for the data strategy, the Supercharge team is developing automated solutions enriched with machine learning

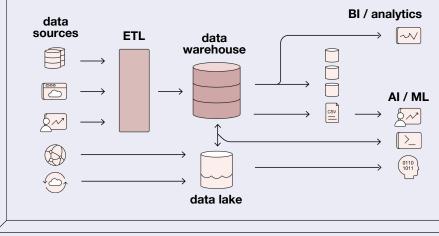

Optimized

operational decisions with automated processing of latest schedule changes information from airlines.

Reporting: utilizing data-driven automation by improving data quality to reduce shrinkage and implementing a 'next day' notification system.

Supply chain planning: performed data analysis to better understand the sales and demand drivers, built insights for a future ML driven forecasting capability.

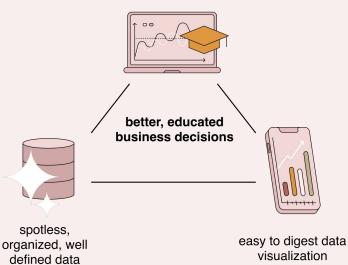

Modern data platform as a solid foundation

()

data driven decisions are best facilitated by the ease of access to data

increasing data literacy

There is a point in every organization where the lack of data driven decisions lead to business loss. The problem is often not that data is missing, it is that employees can't access it with ease in the moment of need. It is possible to get in front of the trouble with data democratization. Decision makers need to have available data to support their calls - in time, in a spotless clean and understandable format.

At first we created **self-service** connected **data marts** in a business readable format, with agreed KPIs and metrics between all departments.

During the groundwork of data mart building **teaching data literacy** in the organization was the key activity, driven by selected data champions from many organizations.

Organizational adoption played important role here, therefore we selected a **self-service data visualisation** tool with quick learning curve.

looking forward to hearing from you
