Security Services

Your Secure and Trusted Solution to optimized Cloud Services

Cyber security attacks are increasing in sophistication, impact and frequency and the threat to organisations incurs costs beyond finances and productivity. Reacting to an attack is far more costly than proactively protecting your business and users but with the right partner you can:

- Build a strategic plan aligned with your business outcomes and your organisation's most prominent risks

- Create and implement a multi-year security strategy that prioritises effective, proactive actions

- Empower and engage your team to make digital security a driving force that improves digital experiences and work productivity.

Atech have been recognised as a leading Microsoft Security Specialist Partner because of our expertise and experience defining, migrating and managing organisations cloud security strategy.

The volume and complexity of threats and the impact they cause is largely due to the increased complexity of hybrid and multi-cloud environments.

Increased Challenges of Cloud Security:

- Lack of interoperability and visibility

- Poor management of access controls

- Misconfigurations & configuration drift (?)

- Lack of unified management and governance

- Hybrid working – expanding attack surface area

- Rapid acceleration & increasing sophistication of cybercrime

- Silos, staffing constraints, and training (governance?)

- Rising cost of cybersecurity risk mitigation & remediation

Benefits to proactive Security measures:

Considerable time saved reacting to threats/attacks

Accelerated regulatory compliance

Reduced costs by embedding security within your IT strategy

Assurance to employees, partners and customers

Our Security Approach

ASSESSMENT
Using the Microsoft Workshop framework and our own assessments we will work with your teams to understand your current security posture and existing IT strategy

DESIGN
Considering your goals and individual requirements we will provide a detailed scope to implement and execute your required Microsoft Security recommendations

DEPLOYMENT
Managing the implementation of your security choices with minimum impact on users or applications to seamlessly transition you to our secure services based on Microsoft technology

OPTIMISATION
Once onboarded to our Secure Managed Service we will be continuously fine-tuning your security posture for better visibility into potential threats and ongoing regulatory compliance enhancements

Guardian Enterprise
Microsoft E5 Security
(minimum investment)

Focus on your company's core competencies while we support you with ours - SLA-driven operations, certified engineers, proactive monitoring and full-service management of your Digital estate.

- 300+ supported users
- 24/7/265 SOC Service (NIST aligned)
- Microsoft Sentinel & XDR (including vulnerability management core)
- Out of the box Connectors included as standard
- Enhanced quarterly M365 Health Check
- Default detection logic - discovering threats and anomalous behaviors (rules)
- Enhanced Security Reporting
- External Attack Service Monitoring
- Remediation Hours
- Cyber Risk Awareness Training

Additional Services

Cloud Native Application Protection Platform Defender for Cloud (Servers, Containers etc)

Email Security Data Governance

Custom connectors (Sentinel) Additional Sentinel Connectors (3rd party)

Patch Management DMARC

Servers / Endpoints (Desktops/Laptops) Microsoft Purview integration

Cyber Essentials CE & CE+ (Managed)

Guardian Business
Microsoft 365 Business Premium
(minimum investment)

Maintain control of your estate while partnering with our Cloud Specialists who work alongside your internal teams as trusted advisors – sharing their industry experience, certified expertise and providing established escalation path with Microsoft.

- <300 supported users
- 24/7/265 SOC Service (NIST aligned)
- Microsoft Sentinel & Defender for Endpoint (Business)
- Out of the box Connectors included as standard
- Quarterly M365 Health Check
- Default detection logic - discovering threats and anomalous behaviors (rules)
- Security Reporting

Optional add-ons

- External Attack Service Monitoring
- Remediation Hours
