

Copilot for Microsoft 365 Zero Trust Essentials

Security readiness you can't afford to overlook

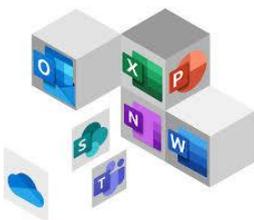

Microsoft Copilot for Microsoft 365 promises to fundamentally change the way people work. This latest innovation of AI presents enormous opportunities for your organisation, providing the essential security and governance controls are in place.

Insufficient data stored in the wrong place won't give you the results you hope to achieve with Copilot for Microsoft 365. There's a lot to consider and we've created a framework to ensure your deployment is as secure as it is effective.

The Atech Zero Trust Essentials Service is designed to provide a tailored approach to security and data readiness. Navigating the complexities of Copilot for Microsoft 365 can be overwhelming if you haven't got the experience in-house to understand and manage the potential risks. Confronting these challenges head-on, integrating changes smoothly, and future-proofing your organisation is what we do best.

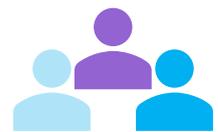

Zero Trust Essentials deliverables:

- ➊ Get your data into Microsoft 365
- ➋ Optimise:
 - ➊ Identity and Access policies
 - ➋ App Protection policies
 - ➌ Device Management and Protection
 - ➍ Threat Protection Services
 - ➎ Secure Collaboration for Microsoft Teams
 - ➏ User Permissions to data
 - ➐ Data Protection

The Atech Zero Trust Essentials Service

Our team of Microsoft Certified professionals understands that every organization is unique, and we work closely with you to evaluate and optimize your security posture. We deliver an optimal user experience that enhances productivity and safeguards your data.

Ensuring maximum user experience

Copilot for Microsoft 365 is only as powerful as the data that feeds it. Accessing damaging, outdated or confidential data could compromise your users and potentially your entire organisation if you haven't considered governance or access.
