

Data engineer

Service
definition

The data engineer creates order out of chaos

We provide experienced data engineers with a wealth of experience in dealing with complex datasets to transform and process these for use in analytics and data visualisation services.

Core features

- Working with Microsoft Azure services including Fabric, Azure Synapse Analytics and Azure SQL
- Developing and managing complex data pipelines through development and delivery
- Extensive domain experience in healthcare and logistics, ensuring our engineers can be self-starting and proactive
- Strong relationships with customers
- Experienced in local and national healthcare system implementation

Benefits

- Self-starting teams reduce the burden on customers and ensure their expertise is being used where most needed
- Decisions prioritised based on deep understanding of Agile lifecycle.
- Stakeholders empowered and supported by skilled data engineer
- Stakeholders supported through Agile adoption

Our approach

We will work with you to understand how we can build sustainable data pipelines and engineering practice to best meet your needs.

We can rapidly build and help to prioritise a product backlog for your project, developing a roadmap and identifying opportunities to add value fast. We deliver robust services to a high standard every time.
