

# Code & Consult Limited SDD

## Information Assurance Service

The Service Definition document (SDD) is designed to provide a summary of the questions asked about the service in the application. The standard areas of response are designed for a cloud service like AWS, so as this is not a cloud service you turn on, but instead a cloud support service, some of them are not applicable and have been removed.

### Overview of the Service

Provide Information Assurance advice covering the following areas - risk assessments/assurance (IS1, NIST, ISO27001/5 frameworks), solution architecture design, solution review, security gap analysis, ITHC planning-scoping-remediation, CIS Audits and compliance checks, documentation drafting for processes and procedures, bid submission reviews, stakeholder management, change control reviews, security incident event management, strategic planning.

### Pricing

Please see the SFIA rate card

### Ordering and invoicing process

Please contact [pt@codeandconsult.com](mailto:pt@codeandconsult.com) to see how we can help you. We follow a normal PO raising process, with invoicing at agreed milestones in line with HMG payment timescales for small businesses.

### Termination terms

In writing, 30 days notice.
