MANAGED AV AND EDR SERVICES

A SERVICE THAT REFUSES TO COMPROMISE.

CYBANETIX

SentinelOne Security platform

Managed Anti-virus

Security event and breach investigation

Security response and remediation

The Cybanetix Antivirus and EDR service increases the security posture through the deployment of a next generation autonomous antivirus and EDR agent across all Desktop, Laptops and Servers across a customer IT estate, which increases the protection against viruses while also providing extensive investigative capability of activity on an end-point. The agent also allows Cybanetix to take remedial and containment action when threats are identified, through network and computer controls integrated to the agent.

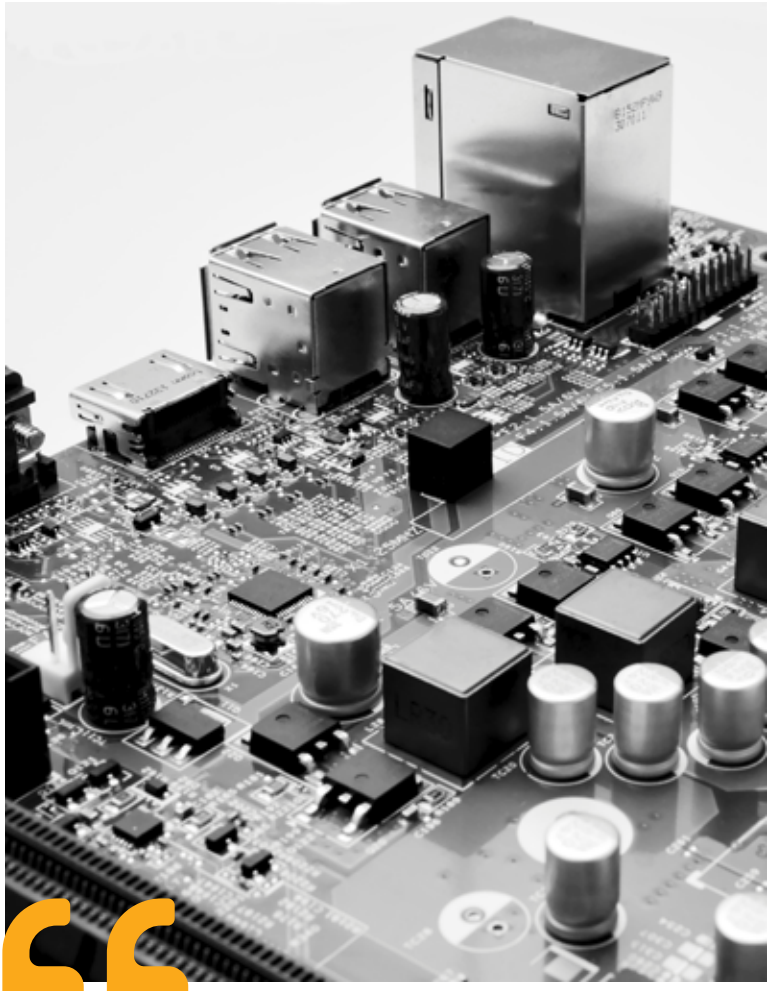
MANAGED ANTIVIRUS

SentinelOne Software Licensing:
1. Device license for **SentinelOne Core**
2. Device license for **SentinelOne Control**
3. Device license for **SentinelOne Complete**
4. Device license for **SentinelOne Ranger**
5. Entity license for SentinelOne Kubernetes

SaaS Hosting of Management console
Setup and Implementation

Moves, Adds and Changes ('MACs') for new and decommissioned devices
1. MACs for grouping
2. MACs for Policy changes
3. MACs for EDR changes

MACs for policies
MACs for Exclusions
Agent and platform upgrades



- Threat huntung
- Behaviour AI
- Network quarantine
- Auto remediation
- 24x7 pro-active investigation of threats
- Device control
- Deep visability

We have had an excellent working relationship with Cybanetix over a number of years and they are one of our most trusted and technically capable partners in the UK.

PETER CARFRAE
UK CHANNEL MANAGER, SENTINELONE

SECURITY EVENT AND BREACH INVESTIGATION

Proactive Investigation of m alicious processes

Detection of Vulnerable Applications scoring a CVS score of High

Detection of rogue devices on network based on customer defined use cases (with Ranger Licensing only)

Customer instigated investigations (with Complete Licensing Only)

Cybanetix outsourced SOC instigated investigations (with Complete Licensing Only and Cybanetix Outsourced SOC customers)

SECURITY RESPONSE AND REMEDIATION

Interim and short term containment of threats

1. Disconnect a device with an active malware from all networks
2. Disconnect an application identified in an active threat
3. Block particular protocols and IP addresses in and out bound on the end point
4. Stop the use of USB devices
5. Blacklist applications
6. Turn off device on which threat was identified.

Remedial activity

1. Kill and quarantine files and processes
2. Remediate activity undertaken by executed processes
3. Roll back device to pre threat detection state
