## Company Overview

**Logiq Consulting is a NCSC assured cyber security consultancy and secure managed services provider focused on safeguarding critical organisational data.**

NCSC Assured for Risk Management and Security Architecture, we're experts in cloud services and data protection, specialising in cost effective, cyber secure solutions for highly regulated sectors and clients including the MOD, Central Government, Civil Nuclear and the wider public sector.

We have significant experience in designing secure networks specifically to meet the security standard required to hold HMG sensitive information and are trusted by the MOD to support Information Assurance and cyber defence across multiple mission critical systems at the highest classifications.

Through a modern, forward-thinking approach that meets the complex security needs of our clients, we deliver systems that significantly improve cyber resilience and mitigate risk, enabling us to make security the foundation of every business.

We specialise in and offer:

### Cyber Security Consultancy

- Systems / Security Engineering
- Secure by Design
- Solution Architecture
- System Design & Implementation
- Technical & Agile Project Management
- Cloud Architecture & Development
- Risk Management
- Specialising in Defence & Regulated Sectors

### Secure Services

- DISX® - secure, scalable data collaboration and communications
- Secure Managed Services
- Microsoft 365 productivity suite
- Secure cloud proof of concept systems
- Secure app hosting for business critical software

All our services are delivered or overseen by Developed Vetting (DV) and Security Check (SC) cleared staff, and our cloud architecture solutions adhere to and are aligned to HMG and NCSC guidelines and policies.

Utilising UK sovereign cloud services only for our defence clients, our solutions for network assurance meet both the MOD and other Government departments required standards.

Logiq is a Microsoft Solutions Partner.

## Secure by Design

Cloud Support

RM1557.14

## Secure by Design - Transformation

Logiq have a proven track record of delivering Secure by Design transformation, shifting organisations from a compliance-based security approach, to one that delivers integrated/proactive continual cyber security risk management to enable more secure, trustworthy and resilient systems.

### Features

- Industry recognised Secure by Design experts
- Supporting MOD in delivering Secure by Design
- SIEM integration
- ServiceNow Tooling
- Implemented Secure by Design portal/framework/guidance
- Training and knowledge transfer
- Secure Cloud Development
- Safeguards for GDPR

### Benefits

- Early identification of risk, mitigating losses
- Security embedded from project outset
- Enablement of any Secure by Design policy
- Reduces attack vulnerabilities
- Streamlining processes delivering faster development cycles
- Proactive risk management frameworks for assessing & mitigating risk

## Secure by Design - System Delivery and Assurance

Logiq have a proven track record of delivering Secure by Design, shifting projects and programmes from a compliance-based security approach, to one that delivers integrated/proactive continual cyber security risk management to enable more secure, trustworthy, and resilient systems.

### Features

- Secure by Design strategy development, enterprise adoption and transformation
- SbD principles and continuous assurance process implementation, management, documentation production
- SbD Delivery Team Security Lead support (including Above Secret systems)
- Risk Management and Assurance / Project Security Management Plan production
- Cyber Security Scoping Appraisals and Security Risk Assessment production
- Secure System / Service Requirements capture (User, Functional, Security)
- Security conscious Business, Enterprise, and Solution Architecture development and design
- Security Architecture development, design, implementation, evaluation, testing, and assurance
- Public and Private Cloud application development, deployment, security assessments, assurance

### Benefits

- Adhere & aligned to HMG and NCSC guidelines / policies
- Compliance and understanding of GDPR
- Provide transfer of latest industry knowledge
- Service delivered by industry leading cyber experts
- Assessment Phase and Discovery Phase support
- Detailed understanding of Secure by Design assurance principles and approach.
- NCSC Assured Consultancy for Risk Management
- Can support projects involving articles subject to ITAR
- Personnel certified under CISSP, CISM and NCSC CCP

## Secure by Design - Training

---

Leaders in the delivery of Secure by Design across Government and with a best-in-class training package delivered by industry experts, we equip our clients' organisations with the skills to deliver risk centric designs to meet business objectives, enhance system resilience, reduce cost and comply with regulations.

### Features

- Introduction to systems thinking for security
- Understanding of Secure by Design and its benefits
- How to establish what is needed from security
- Guidance for setting of security requirements and assigning controls
- Guidance on using standards and policies
- How to gain and maintain assurance for regulatory bodies
- One to one key stakeholder engagement
- Delivery through workshops, where relevant
- Tools to self-assess risk and attain desired outcomes

### Benefits

- Moves attendees from compliance to design
- Empowers to continually identify and manage risk
- Ensure system and projects are future ready
- Embed culture of security first & throughout
- Seamless integration of Secure by Design principles

# Cyber Security & Assurance

Cloud Support

RM1557.14

## Risk Management

### Cyber Security & Assurance

NCSC Assured for Risk Management, collaboration drives our delivery focus, balancing the critical importance of risk management with key delivery requirements. Our holistic approach ensures organisations are equipped to identify/assess/mitigate vulnerabilities effectively.

#### Features

- NCSC Assured for Risk Management
- Tailored solutions addressing unique security challenges
- Early security adoption in project lifecycle
- Qualified Information Assurance & Risk Assessors CISM, CITP, ISO27001
- Cyber security policy, standards, procedures and compliance
- Risk Management Frameworks – Cyber Assessment Framework (CAF)
- Cloud security assessments
- Information Assurance policies and procedures
- Cyber Security as a Service (CSaaS)
- Cyber Security Strategy incorporating NIST CIS Controls

#### Benefits

- Aligning security approach with risk appetite
- Security Architecture enhancement
- Strengthened architecture defence compliant with regulatory requirements
- Embedding resilient security posture
- Agile approach to delivery
- Enterprise wide Risk Management methodologies
- Cloud solutions

## GovAssure

### Cyber Security & Assurance

Meeting the standard for GovAssure, we are recognised as an NCSC Assured Consultancy for Risk Management and Security Architecture, validating our cyber expertise, reflected throughout our service offerings. Understanding that GovAssure aims to strengthen cyber resilience throughout Government IT infrastructure, we align our services with NCSC's Cyber Assessment Framework (CAF), assessing risk management, gaps, incident response & access control, thereby supporting the principles of GovAssure.

#### Features

- Effective validation of risk assessment against the Cyber Assessment Framework
- Ability to assist with implementation of the Cyber Assessment Framework
- Linkage of the risk assessment to organisation goals and functions
- Ability to produce tailored Information Assurance Report enabling organisational outcomes
- Post IAR review of targeted improvement plan
- Ability to perform Lessons Identified workshop to enabling process improvements

#### Benefits

- Enables understanding the risk posture of the department
- Enables action plan to improve the cyber resilience of the department
- Enabling effective risk remediation activity
- Enabling lessons identified to actively improve processes
- Alignment to the Government Cyber Strategy

## Security Architecture

### Cyber Security & Assurance

Underpinned by NCSC Assurance for Security Architecture, we take specific business/project requirements & translate them into clear, actionable security measures. Our experts work to NCSC and NIST guidelines to undertake evaluations, vulnerability assessments, threat modelling, comprehensive architecture design and implementation.

#### Features

- NCSC Assured for Security Architecture
- Consultancy aligned to ISO27001
- Certified architect – TOGAF, AWS, CRISC
- DevOps integration
- Defence experienced Cloud Architects
- Secure Container Design (Kubernetes)

#### Benefits

- Security Architecture – delivering blueprints & roadmaps for secure IT
- Holistic approach embedding secure architecture throughout business
- Aligned to NCSC & NIST guidelines
- Industry recognised security specialists TOGAF, CISSP, CISM
- MODCloud Experience
- Major Critical National Infrastructure (CNI) programme experience
- Cyber Essentials Plus certified organisation
- Cyber Assessor certified experts

## Audit & Review

### Cyber Security & Assurance

Proactive security is key to a robust Cyber stance which is why our experts can deliver focussed assessments & audits, providing a 360-degree view of an organisation's security posture. Aligned to industry standards (ISO27001 & NIST CSF) we embed a systematic repeatable approach to assess risk & establish continual improvements.

#### Features

- Qualified professionals providing independent security compliance audits
- Bespoke approach to deliver optimum outcomes
- Review and outline of threat and vulnerability landscape
- Compliance or risk based audits
- Bespoke approach for cyber and information security audits
- Security governance review, ISMS documentation processes and procedures
- UK HMG frameworks and best practice (SPF, CAF, Cyber Essentials)
- National Cyber Security Strategy
- NIS regulations and ISO 27001

#### Benefits

- Bespoke delivery to meet business requirements
- Improve overall cyber resilience and cyber security posture
- Security compliance audits
- Impartial assessments aligned with security compliance
- Reduces overall business risk landscape
- Qualitative and quantitative audit methods
- Preparation for formal security certification

# Technical Programme Support

Cloud Support

RM1557.14

## Business Analysis

### Technical Programme Support

Our Business Analysis experts support clients to successfully transition from traditional to cloud services. Utilising Agile methodology, key stakeholder engagement ensures detailed capture of business requirements & user needs, delivering programme critical analytics & business insight.

#### Features

- Requirements elicitation and analysis, minimising risk
- Stakeholder management and communication planning
- Solution evaluation and recommendation
- Business process mapping and improvement
- User case development, acceptance testing and quality assurance
- Change management planning and execution
- Impact assessment & gap analysis, delivering business intelligence & analytics
- Training and knowledge transfer
- Business process automation and optimisation
- Enterprise architecture planning and design
- Cost-benefit analysis and ROI estimation

#### Benefits

- Streamlined project execution
- Alignment of technology with business objectives
- Minimised risks and enhanced decision-making
- Improved stakeholder engagement and communication
- Optimised business processes and efficiency gains
- Enhanced data-driven insights and informed decision-making
- Higher quality products and increased customer satisfaction
- Timely delivery and successful project outcomes
- Seamless transition and adoption of cloud solutions
- Increased agility and adaptability to market changes
- Maximised return on investment and cost savings

## P3M Project Management

### Technical Programme Support

Supporting businesses to deliver complex multi-disciplined programmes across Defence, Nuclear & wider government, our P3M experts have demonstrable experience in APM, MSP, PRINCE2 & Agile methodologies, driving efficiency through optimisation while managing delivery through to benefits realisation.

#### Features

- NCSC Cyber Assessment Framework (CAF) alignment
- Identify and mitigate potential risks
- Integrated project delivery utilizing a secure ecosystem
- Blend of Programme & Portfolio specialists
- APM, Agile, Waterfall
- Customer friend demonstrable experience
- Mentoring & coaching
- Collaboration at highest level, 'critical friend' supporting key decision deltas

#### Benefits

- Utilising latest technology, producing essential Business Management Information (BMI) for informed decision making
- Extensive experience of delivery MOD Critical National Infrastructure Programmes
- Aligning clients strategic goals
- Streamlined approach to reduce silos, waste and needless complexity
- Streamline cloud & cyber security related requirements
- Improved financial and resource control and planning
- Holistic 'big picture' approach

## Systems Engineering

### Technical Programme Support

Systems Engineering is a core Logiq service, managing technical & non-technical complexities through project & programme lifecycles. Bespoke definition based on project requirements, translating technical specifications & informing detailed design to deliver comprehensive outcomes.

#### Features

- Expertise in ISO/IEC/IEEE
- Cloud & Platform experience (AWS, Azure)
- Multi-disciplinary engineers, incorporating DevOps & Systems Integration
- Architectural solutions delivering scalable solutions
- Demystifying and modelling complex problems, delivering future solutions
- Design, implementation and maintaining critical systems
- Bespoke approach to client requirements
- Aligning industry best practice, HMG CAF and SPF, and ISO27001

#### Benefits

- Embed security within the foundation of business decisions and strategy
- Demystifying and modelling complex problems, delivering future solutions
- Safeguard sensitive information using cloud or software solutions, client specific
- Optimised solutions aligned to client requirements
- Secure complex system design, mitigation future risk

## Business Intelligence

### Technical Programme Support

Our experts deliver cloud-based business intelligence solutions unlocking the power of data to provide tailored management reporting. We cover design, development, deployment & maintenance using Microsoft Power BI, creating compelling visualisations to bring your data to life.

#### Features

- Requirements elicitation and analysis
- Microsoft certified Power BI specialists
- Microsoft Azure, Power BI and Power Platform Apps
- Innovative and scalable business intelligence and analytics on the cloud
- Enhanced data governance through secure and controlled access to data
- Custom dashboard/report development to support specialised workflows
- Training and Knowledge Transfer

#### Benefits

- Agile delivery of BI solutions
- Self-service reports and dashboards
- Timely insights through automated dataflows
- Consolidated management of reports
- Improved trend analysis and forecasting
- Robust business intelligence platform
- Make strategic decisions from reliable & consistent data
- Informed decision making for business transformation

## Data Analytics

### Technical Programme Support

---

Our data analytics service ensures clients gain access to their business critical data to enable business critical decisions. Utilising cloud technologies such as Azure, AWS & Microsoft Power BI & Applications.

#### Features

- Data visualisation of critical Business Management Information
- Live reporting through enterprise level data flows
- Business Intelligence in real time
- Connection to multiple data sources, MS and client platform tooling
- Power BI dashboard, interactive engagement
- Training through workshops, one to ones
- Power Apps development from MS Service Partner
- Cloud Hosting through DISX PaaS service

#### Benefits

- Blended professional teams, consolidating requirements capture with customised output
- Fully configurable approach
- Share real time information with key stakeholders

## Solution Delivery

Cloud Support

RM1557.14

## Architecture & Design

### Solution Delivery

Delivering the crucial link between business needs and technical solutions. NCSC Assured for Security Architecture our services aim to simplify complex problems, through translating simple & complex ideas into technical outputs, managing development process and delivering viable solutions, supporting clients to achieve digital & cloud transformational goals.

#### Features

- Enterprise Architecture
- Technical Architecture – cloud infrastructure services, replacing legacy systems
- Security Architecture professionals – TOGAF, CRISC, AWS, NCSC Assured
- Data Architecture – data lifecycle, flows, interface through to integration
- Networks & Security – DDaT experience across security design and engineering
- Integrated Architecture
- Cloud Architecture – Governance, Technology working Groups
- Cloud native applications
- Secure by Design developed architecture, embedding Cyber Security

#### Benefits

- Bespoke approach aligned to client cloud solutions
- Blended optimised teams, technical specialists incl CISSP, APM, Agile
- Rapidly deployable, flexible and adaptable teams
- Digital transformation
- Public sector experience (MOD, DWP, HoP)
- Implemented governance models
- Robust, secure business infrastructure
- Integrated approach delivers improved systems and workflows

## ServiceNow

### Solution Delivery

We can provide end-to-end licence, implementation, deployment, upgrade, monitoring & maintenance services for ServiceNow platforms, hosted via ServiceNow's SaaS model or customers' infrastructure, specialising in highly regulated/secure environments.

#### Features

- Business process analysis to optimise your processes
- Agile delivery methodology and project management expertise
- Custom applications development on the Servicenow platform.
- Full ServiceNow managed services and support
- ServiceNow platform hosting options: ServiceNow SaaS, customer private cloud, or customer on-prem.
- Experienced delivering ServiceNow into secure environments
- Full product lifecycle delivery
- Consistent customer outcome focus
- Test Automation using ServiceNow's Automated Test Framework (ATF)
- ServiceNow platform secure and policy compliant

#### Benefits

- Optimised ServiceNow solution design to maximise output
- Clear and effective management of your delivery
- Delivery of a ServiceNow solution aligned to your organisational needs
- A supported platform that meets your required SLAs
- The ServiceNow platform can be hosted wherever is best for your business, including secure/regulated environments
- The delivery will meet all Government security requirements and be security policy compliant
- Reduced risk through end-to-end delivery services
- Thorough 360 engagement with your users to understand their requirements
- Collaboration to define your ServiceNow Strategy
- Accelerate your time-to-value realisation

## Cloud Infrastructure & Apps

### Solution Delivery

Specialists in architecting solutions for cloud that are secure, and where required, accreditable. Collaborative working with our clients to transition from existing infrastructure, or design new bespoke solutions. AWS, Azure, hybrid and cross cloud architectural solutions, delivering scalability and robust secure solutions.

#### Features

- AWS, Azure, hybrid and cross cloud architectural solutions
- Encourage adoption of cloud native technologies
- Delivery of robust secure cyber solutions at scale
- Maximise clients investment in cloud technologies
- Security reviews across Cloud and Infrastructure
- Cloud Services for infrastructure compliance, adhering to frameworks
- Security risk management evaluation against NCSC guidance and HMG frameworks
- Data analytics – data management

#### Benefits

- Bespoke approach aligned to client cloud solutions
- Cloud ready solutions to support business transformations
- Cloud migration – aligned to client requirements
- Data migration – strategies to mitigate risk and financial impact
- Delivering ROI for capital programmes
- Agile methodology incorporating DevOps

## Cloud Migration

### Solution Delivery

Our Cloud Migration experts support architecture, migration and transition planning, automated deployment, and configuration across all cloud suppliers for bespoke and COTS solutions on cloud and hybrid cloud for critical national capabilities at Official, Secret, Above Secret.

#### Features

- Deep dive evaluations
- Secure cloud architecture design (Secure by Design)
- Design incorporating compliance, governance and risk
- Blended expert teams, Agile, Technical Architecture, DevOps, Systems Engineering & Security
- DevSecOps integration to support secure migration and cloud development
- Public & private cloud
- Azure & AWS alongside customer provisioned environments
- Secure, scalable, flexible enhanced collaboration delivering business continuity
- Experts in Defence Cloud solutions
- NCSC best practice approach
- Cloud optimisation services, incorporating assessment and configuration

#### Benefits

- Bespoke approach aligned to client cloud solutions
- Simplifying the complexities of navigating secure cloud migration
- Experience of highly regulated environments
- Our clients cloud migration partner
- Experience of highly regulated environments and market sectors
- Technology agnostic assessment of cloud technologies

## Agile Support

Cloud Support

RM1557.14

## Agile Training

### Agile Support

Our Agile training services are delivered by Scrum Masters and Agile Coaches with 10+ years of proven experience in delivering training outcomes across multiple industries. Delivered face to face, competent in delivery of virtual & physical training applying appropriate practices.

#### Features

- Experts in Agile/Scrum environments delivering training to teams and organisations.
- Professional Scrum Masters experienced in Scrum, Kanban, SAFe, Lean, DevOps
- Experienced in delivering training on a variety of topics to Scrum teams but also to wider organisation audience. Training can include:
  - Agile/Scrum basics
  - Leading Agile teams
  - Facilitation Techniques
  - Effective dev team Scrum implementation
  - Introduction to KANBAN and FLOW metrics
  - Introduction to SAFe
  - Product tools – ADO, JIRA
- Tailored training to the needs of the client/organisation
- Interactive workshops offering practical experience within a broad set of Agile frameworks and complementary topics.
- Equip teams with a set of toolkits to support product delivery
- Agile training services drive innovation and value delivery
- Essential for long-term success in a competitive marketplace

#### Benefits

- Agile training helps to embed “best-fit” ways of working across a wide spectrum of your organisation
- Training is tailored to the user’s requirements ensuring that the end user receives training they need and not “off-the-shelf”
- Upskilling of your organisation and teams

## Product Ownership

### Agile Support

Helping to unlock the potential of government projects, backed by years of hands-on experience within the MOD, our product owners bring unparalleled expertise and a proven track record of successful project delivery.

Our flexible approach is designed to complement your internal skills and capacity, providing support where needed to drive optimal results. We excel at curating, communicating, and delivering a solid product vision and strategy that aligns with your organisation’s goals and objectives.

#### Features

- Flexible approach to support internal skills and capacity
- Ensuring product backlog is transparent, visible and understood
- Backed by years of hands-on experience within the MOD
- Effective workshop hosting for PI planning, retrospectives or sprint reviews.
- Coaching and empowering teams and senior stakeholders
- Customer feedback management
- Leading teams through their digital transformation
- Support with Service Exec Model (SEM) – projects to product delivery.
- Iterative delivery and continuous improvement focused

#### Benefits

- Focus on frequent delivery of value
- Deep experience of Discovery, Alpha and Beta phases
- Experienced Product Owners accredited to A-CSPO level
- Representing the needs of all stakeholders
- Specialists in Cyber Security
- Risks effectively identified, managed and included in product backlog
- Experts in Scaled Agile delivery, eg SAFe or LeSS

## Scrum Master

### Agile Support

Effective Scrum Mastery is the key enabler to high-performing teams. Our industry leading Scrum Masters support our client's needs for enabling "best-fit" ways of working, delivering quality outcomes.

Based around 3 core principles – Transparency/Inspection of deliverables/Continual adaptation in delivery

#### Features

- Certified Scrum Masters experienced in complementary practices e.g. Kanban, SAFe, Lean
- Continuous improvement champions supporting others in this practice
- Servant Leadership
- Regular experimentation within the team and wider organisation
- Competent facilitators both virtually and in-person
- Capable in supporting the Product Owner with Product Management practices
- Experience of supporting teams in the successful delivery of Cloud, Digital, Cyber and Business Change

#### Benefits

- Multi-disciplined certified Scrum Masters
- Data enabled teams
- Earlier identification of inefficient working practices.
- The development of a culture of experimentation
- Empowered autonomous self-organising teams
- Cross-functional teams helping to improve the resilience within a team
- Training, coaching and mentoring of others helps improve your capability and ensures teams thrive
- Ensure organisation structures are optimised and best practice aligned (DDaT)
- Track/measure progress to drive continuous improvement and optimise performance.

## Agile Coaching

### Agile Support

With over 10 years Agile coaching and delivery expertise, paired with highly pragmatic mindsets, we tailor best practice approaches within your organisation's constraints. Delivering formal training & in-role coaching to all levels up to C-Suite, we embed skills & behaviours that ensure high value delivery that exceeds user needs.

#### Features

- Certified Agile coaches including Scrum, Kanban, SAFe, Lean, DevOps, Scrum@Scale
- Scalable approach aligned with client needs, governance and best practice
- Operate sustainably through the development of internal coaching capability
- Build a sustainable culture of continuous improvement and knowledge sharing
- Domain expertise aligned with government standards & frameworks (GDS)
- Experience of successful Cloud, Digital, Cyber and Business Change delivery
- Backlog tooling expertise and training (ADO, JIRA)
- Track and measure progress through Agile metrics
- Formal training followed by in-role coaching to sustainably upskill teams/individuals

#### Benefits

- Tailored approach and sustainable culture enabling lasting change and success
- Agile approaches that increase efficiency
- User focussed delivery leading to successful outcomes and user satisfaction
- Agile ways of working enabling your organisation to adapt rapidly
- Training and coaching improves your capability and ensures team thrive
- Improved performance through development of capability at all organisational levels
- Faster benefits realisation and improved flow of work
- Ensure organisation structures are optimised and best practice aligned (DDaT)
