Service Definition
Document

Rapid^x

We offer a range of starter packs for fast-time-to-value deployment services for SAP Signavio tools to kick start your transformation journey. Not sure what to go for? Don't worry. Our Digital transformation process mining/management solution assessment service will evaluate your requirements and provide you with the best fit to meet your business objectives.

SAP Signavio Starter Pack for RISE with SAP*

A service providing expert know-how and guidance on maximising the value of 3 core components of the SAP Signavio Transformation Suite for S/4HANA transformations

* Please refer to our BPO Consulting Services Page

SAP Signavio Process Insights Discovery Edition

Establish a strong business case and proof of value (PoV) for SAP Signavio for S/4HANA transformations and business process optimisation projects

SAP Signavio Process Insights Quickstart

Our recommended introduction to the SAP Signavio Transformation Suite as part of the Discover phase of your S/4HANA migration project

SAP Signavio Transformation Suite

This is a cloud-based process transformation suite that gives organisations the ability to understand, improve and transform business processes across the entire enterprise, fast and at scale. SAP Signavio acts as a force multiplier for SAP on-premise and cloud investments, ensuring that the focus is not just on technical implementation, but a unique opportunity to optimise processes to fulfil strategic objectives. Irrespective of your transformation path, SAP Signavio supports your move to SAP S/4HANA, making the transition fast, manageable, and most importantly, one that realises business value, not just throughout the transformation project phases, but beyond.

Understanding the current or 'as-is' state of processes and how they are being executed is a critical first step in evaluating what needs to be done to get to the desired 'to be' future state. Process Insights helps make sure you kick-off your transformation journey on the right foot and is our recommended introduction to the SAP Signavio Transformation Suite.

Already on S/4HANA?

SAP Signavio is not only designed to support organisations during the project phases of the migration to S/4HANA. It is your process optimisation partner for the long haul, providing a collaborative one-stop platform for all things process related, for continuous monitoring, identification and realisation of improvement opportunities.

What does the customer get with this RDS?

The customer will get a detailed assessment of one complete end-to-end process or use case, including the identification of process gaps and opportunities for improvement. From process discovery and root cause analysis, to recommended actions on issue resolution and automations, this is the most comprehensive way to begin the journey to business transformation and process optimisation.

Setup: (Supporting customer IT team)*

- Source system requirements incl. product & software component and plugin versions
- System user configuration and roles for data connection
- Secure communication configuration requirements
- Identity provider configuration for application users
- User roles and access management
- One time data extraction from ECC / S/4HANA for one process

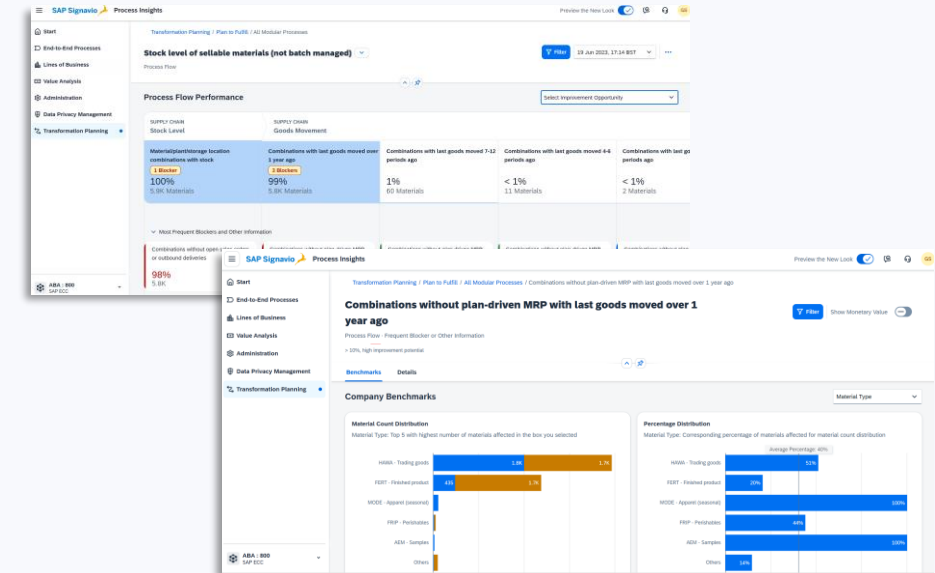

* Requires subscription to application

Assessment & Outcomes:

- Value report to establish strong business case
- Presentation on initial insights and findings
- Tailored improvement recommendations and action plan
- One day user training & PoV workshop
- Documentation (user guide + delivered content)
- Next steps and roadmap for scaling & adoption

Benefits:

- ✓ Quick identification of process inefficiencies and access to hundreds of KPIs, readily available insights, best practice recommendations and actions
- ✓ Share key performance metrics and insights with stakeholders and foster better collaboration between the Business and IT
- ✓ Begin to drive enterprise-wide business transformation by identifying high impact-low effort improvement opportunities

Pricing: £12k

Duration (Implementation & Assessment) : 2 weeks

Client Access: TBD

Data Volume: A one-time data extraction for one E2E process or use case

Thank You
