Service Definition Document

Innovation as a Service

Devsultants can help you accelerate innovation within your organisation. Our team have experience in every aspect from generating and developing ideas, through to rapid prototyping, developing business cases in line with HMT guidance, and agile development and business change methodologies to make your ideas a reality.

Service features

- Setting up and running an innovation facility
- Working with cloud, hosted, and hybrid capabilities
- Efficient, agile ways of working
- Accelerated innovation and research process
- Idea exploration and evaluation
- Rapid prototyping support
- Business case development
- Agile, iterative development methodologies
- Communication and presentation of mature ideas

Service benefits

- Customer centric approach focused on outcomes, helping you work better
- Independent team with no affiliations to specific technology vendors
- Quickly showcase the user experience to stakeholders
- Early user engagement and buy-in, reducing future impacts
- Develop what you need, quicker to maximise through-life benefits
- Continuously improve, iterate, adding additional benefits over time
- DV and SC resources, so fewer delays waiting for clearances

Credentials

UK Government Client

Our team rapidly developed a user interface with sample data for senior stakeholder demonstrations of new capabilities to support the introduction of new legislation. The ability to show in real terms what the legislation would provide to end users helped create a shared understanding of the value it would create, ultimately leading to the beneficial legislation being introduced.

Secure Government Client

The team helped the client to set up and scale a new innovation facility to research and trial new concepts before passing the learnings, and prototype designs and outputs to a delivery function for national rollout.

Having only limited funding initially, the innovation facility was built up using minimal infrastructure, and open source technologies, but was able to demonstrate such value that additional funding was provided to scale the facility and take on new projects. This facility is still running today, with full technology stack integration, and a rainbow team on site to build and trial new capabilities for a range of partner organisations.

This facility has enabled partners to save millions in costs by de-risking delivery and identifying the optimal solutions which users can actually try before major rollouts.
