ABOUT US

GetSwarms functions as an IT digital solutions delivery practice, working closely with clients to furnish effective technology and supply chain management solutions. Our foremost aim is to deliver tangible value, enhancing business operations and addressing end-user requirements in today's agile, digital environment.

Our consultants bring extensive experience from engagements with prominent public and private sector entities, assisting them in adopting forward-looking global and regional solutions. We excel in facilitating large-scale digital transformations, navigating intricate multi-vendor deals, and spearheading innovative technologies.

We take pride in our strong partnerships with major Government departments, where we not only oversee but also advise on, design, and execute end-to-end governance processes. Our governance frameworks cover the entire change lifecycle, including agency-wide change portfolios, ITIL and GDS service design and management, and procurement strategies.

With our team's wealth of expertise, we specialize in supporting clients transitioning from Monolithic to disaggregated IT supply chains, ensuring seamless operations and optimal performance. Fundamentally, we manage vendor interactions, comprehending both user and vendor perspectives, to drive optimal value for the client while navigating the commercial realities. Our pragmatic approach, bridging commercial negotiations and deep technical understanding, fosters collaborative momentum, instilling confidence, and filling knowledge gaps to deliver practical solutions aligned with senior stakeholders' strategic roadmap.

THE "SWARMS" OF EXPERTS

We have organized our workforce into "Swarms". Each Swarm typically includes our own staff, associates, industry leaders, technology domain experts, SMEs and service providers from multiple locations. This provides us with a rich and diverse pool of experts whose knowledge span across industry, domain, technology and have high degree of experience in implementing typical solutions.

CAPABILITY OVERVIEW

Get swarms provide our clients with access to high quality IT and Technical professionals to support business critical programs. Our dedicated Support Management teams deliver a range of Cloud Support services to Public and Private sector organizations across the UK, including.

- Consultancy Solutions
- Outcome Based Projects
- Process and IT Outsourced Managed Services.

We have implemented programs across multiple government entities to provide intricate Cloud Support services, including Cloud Strategy & Architecture, Programme Management Services, Service Integration, and Software Development. Our proven expertise in effectively supporting public sector clients has empowered us to cultivate a diverse range of Cloud Support services spanning various IT domains, including:

- ➢ Cyber Security
- ➢ Digital Resiliency
- ➢ Deskside Services
- ➢ Application Development
- ➢ Infrastructure
- ➢ Software Implementation
- ➢ Business Continuity
- ➢ Service Integration & Management

We adopt a strategic stance in our client partnerships, fostering close collaboration to swiftly deploy cutting-edge Cloud Support solutions. Guided by a business-centric approach, we deliver dedicated account management services led by our Swarms and offer complete flexibility, delivering both on-site and off-site hosted services tailored to meet specific client needs. Through our broad market reach and vast network of skilled IT and Infrastructure professionals, we provide access to top-notch Cloud Support solutions aimed at ensuring streamlined service delivery while minimizing disruption to our clients' regular business operations.

| Service Culture | Quality Assurance | Employee Engagement | Customer Experiance |

DELIVERY CAPABILITY

At the heart of every project, we embark on lies the commitment to deliver tangible value to client organizations. We accomplish this by implementing a best-practice framework, robust project governance, and the adaptability to fulfil the diverse Cloud Support needs of our public sector clients through the expert application of industry-leading services. Aligned with ITIL v3 ITSM methodology, we integrate these principles to drive continuous improvement and uphold best practices across our engagements. Our framework for continuous improvement facilitates comprehensive performance measurement across Service Design, Service Transition, and Service Operation. Our services are categorized into four primary delivery streams outlined below, each focusing on a specific aspect of the business journey to ensure maximum impact.

Consultancy services

Our consultancy services draw upon our wealth of experience to assist client organizations in navigating any challenges they face in their Cloud infrastructure journey. By harnessing our expertise and tapping into our network of specialized talent spanning various technical and business domains, we collaborate with client stakeholder groups to develop tailored solutions. Our consultancy offerings encompass a spectrum of services, including in-depth analysis of critical challenges, performance assessments, solution strategy development, insightful reporting, and more, all aimed at ensuring the effective achievement of goals.

Project Solutions

At times, projects demand expertise that client organizations may lack internally, either in terms of resources or time for upskilling specialists. We possess the capability to mobilize a focused workforce with the requisite skills to plan, initiate, and execute specific project requirements, or even entire project scopes. In addition to augmenting our clients' internal expertise and project teams, we provide a project rescue service. This entails deploying a rapid response team comprising highly qualified professionals to ensure that projects and programs stay on course.

Managed Projects

For projects and extensive programs where handling requirements in-house proves impractical for client organizations, our managed solutions offer an outsourcing alternative emphasizing controlled and expert, quality-driven delivery that inspires confidence. Managed solutions typically operate within a fixed timeframe, defined by milestone delivery metrics and governance. Some commonly sought-after managed solutions include:

- ➢ Enterprise Software Upgrade or Integration
- ➢ Hardware Replacement
- ➢ Data Centre Moves
- ➢ Cyber Security Maturity
- ➢ Business Continuity & Resilience
- ➢ Programme Management.

IT Managed Services

Our Swarms possesses the capacity to manage the IT needs of client organizations. Leveraging our proven track record in IT and Business Process Outsourcing, coupled with our robust talent services and extensive project management expertise, we are equipped to strategize, execute, and oversee a diverse array of services tailored to your exact requirements. These services encompass.

➢ Deskside Support
➢ Service Desk
➢ Project Management Office
➢ Business Process Outsourcing
➢ Technology Development
➢ Service Integration and Management.

GETSWARMS CLOUD SERVICES

With extensive expertise in Cloud Support Services, GetSwarms provides impartial advice and specialized expertise to meet all client needs. Our highly proficient Cloud specialists possess the capability and capacity to deliver a fully adaptable model aligned with client-specific specifications and objectives.

As specialists in the public sector, we employ a collaborative approach to planning and delivery, conducting thorough Cloud readiness assessments and collaborating with stakeholder groups to strategize, design, and implement services and mitigation strategies. Our focus on business priorities and our dedicated account and service management provisions are aimed at fostering service excellence across our programs, resulting in several key benefits, including:

- ➢ Optimizing Cloud capabilities
- ➢ Access to top-tier Cloud specialists and expertise
- ➢ Customized, scalable, and flexible solutions adaptable to evolving needs.
- ➢ Collaborative partnership fostering reliable delivery and trusted advisory.
- ➢ Transparent, benefit-driven solution approach
- ➢ Flexible commercial arrangements tailored to client needs.
- ➢ Extensive knowledge transfer, training, and ongoing support
- ➢ Ensured service continuity and reliability.

Are you facing challenges with intricate sales procedures, irregular customer interactions, and ineffective order handling?Through GetSwarms' B2B Commerce consulting, your clients can relish a smooth self-service journey akin to the simplicity of B2C purchasing.By establishing a contemporary, engaging, and tailored eCommerce platform, you'll witness a substantial uptick in internet sales.Teaming up with GetSwarm guarantees that your

sales staff gains access to enriching insights, lightening their workload and hastening revenue expansion. Embrace top-tier solutions to revolutionize your B2B interactions and attain eCommerce success in the digital realm.

Learn more

Geographical Information Systems (GIS) service

GetSwarm's Cloud Geospatial Information Systems (GIS) Services offer expertise in geospatial analysis and geomatics, enabling organizations to execute sophisticated cloud-based GIS projects effectively. We support projects from their inception through planning, design, and execution, equipping you with the necessary skills to derive the greatest benefit from your cloud-based GIS systems and geospatial data.

Learn more

ISO 27001 Audit and Support Services

GetSwarms' ISO 27001 Audit and Support Services furnish a structured framework comprising policies, procedures, and controls to mitigate legal, physical, and technical information security risks. We conduct meticulous audits, aid in implementation, and offer ongoing support to attain and uphold certification. Our proficiency guarantees stringent security measures, safeguarding data integrity and fostering stakeholder trust. Our internal audit service adopts a top-notch approach, assisting buyers in crafting and executing an effective ISMS audit program, ensuring sustained ISO 27001 compliance and opportunities for system enhancement.

Learn more

Cloud Operating Model Service

Get Swarms offers a comprehensive service to develop and implement a cloud-centric target operating model. Aligned with ITIL standards and adaptable to any cloud platform, it ensures SIAM readiness and reduces total cost of ownership. Expertise spans strategic planning, infrastructure optimization, DevOps integration, and governance frameworks, enhancing agility and competitiveness.

Learn more

Business Operating Model Service

We offer a structured approach to refine and optimize the way businesses operate. Get Swarms assists businesses by analyzing current processes, identifying inefficiencies, and designing tailored solutions to redefine their operational framework to align with their objectives and supercharge efficiency, maximizing profitability.

Learn more

Target Operating Model (TOM) Service

Swarms Service offers comprehensive solutions designed to optimize and refine businesses operational structures. Through meticulous analysis and strategic planning, we tailor solutions to align operations with organizational objectives. By leveraging process mapping, technology integration, and change management, we empower clients to achieve their desired operational targets seamlessly.

Learn more

Enterprise Architecture services

Our Service involves analyzing, designing, and implementing organizational structures to align business objectives with technology solutions. We assess current systems, define future state architectures, and develop strategic plans to optimize efficiency, agility, and innovation. Leveraging Swarms proficiency in TOGAF and BPMN, businesses receive tailored solutions to drive sustainable success.

Learn more

Cloud Architecture

GetSwarms Cloud Architecture service emphasizes establishing standardized, resilient cloud services to streamline intricate legacy architecture. We prioritize developing business capabilities for long-term utilization of cloud services, employing agile methodologies and leveraging digital platforms. With vast experience in government and supplier collaboration, we offer secure design, delivery, and assurance services, operating across public clouds (AWS, GCP, Azure, OCI) and aiding in service migration.

Learn more

Infrastructure as a Service (IaaS)

GetSwarms IaaS offers comprehensive support for the development, configuration, and deployment of Infrastructure as a Service (IaaS) solutions aimed at delivering

applications via the cloud. Our suite of services includes provisioning virtual machines, managing storage, and configuring networking elements for our clients. Through remote access via the Internet, organizations can efficiently oversee and control these resources. IaaS streamlines the process of scaling IT infrastructure dynamically, reducing the need for substantial upfront investments in hardware and ongoing maintenance expenses.

Learn more

Software as a Service (SaaS)

Get Swarms offers Software as a Service (SaaS), covering the entire implementation lifecycle. From initial analysis and cost estimation to design, architecture, development, testing, deployment, and support, our teams collaborate seamlessly. We create customized, robust, secure, and scalable SaaS solutions, tailored to address your business's intricate needs.

Learn more

Multi Cloud Managed Service

Our Multi-Cloud Managed Service empowers helping UK government organisations support digital services to efficiently manage and optimize their cloud operations across multiple platforms. From optimized performance to enhanced security, Swarms offers holistic management solutions tailored to your unique needs. Scale effortlessly, reduce costs, and stay ahead in today's dynamic digital landscape with our expert guidance.

Learn more

Multi-Cloud Health Check Service

GetSwarm's conduct a precise evaluation of Cloud Operational Capabilities, emphasizing Multi-Cloud perspectives. Assessing across best practice towers, we collaborate with stakeholders to evaluate current operations and platform utilization against a Multi-Cloud Reference Architecture. Our assessment delivers comprehensive findings and recommendations for implementing a centralized Multi-Cloud Architecture effectively.

Learn more

NoSQL Database services

Our service offers a flexible approach to storing and handling data, ideal for managing large volumes. Utilizing NoSQL databases such as MongoDB, Cassandra, or Redis, we

ensure effective management of unstructured and semi-structured data. our service provides expert support and assistance with all aspects of NoSQL databases potentially running on cloud-based infrastructure. From database design through to physical build, performance tuning and security optimisation. In-life operations such as upgrades and one-off or regular ETL (Extract, Transform and Load) operations can also be supported.

Learn more

Backup as a Service (BaaS)

GetSwarm's Backup as a Service (BaaS) delivers a standardized backup solution suitable for standalone use or as a complement to existing on-premise and public/private cloud setups. Our BaaS operates as a managed service, featuring monitoring, alerting, and optional regular backup testing.

Learn more

Microsoft Azure Support

We offer dedicated Microsoft Azure Support to organisations, ensuring smooth operations of their Azure cloud environments. Our services encompass technical assistance, troubleshooting, performance optimization, security guidance, and cost management. With Get Swarms, organisations can maximize the potential of Azure, focusing on growth and innovation while leaving the technical complexities to the experts.

Learn more

AWS Design and Implementation services

Our service aids organizations in architecting and executing AWS migration initiatives securely and expansively, ensuring optimal outcomes. We assist in designing, constructing, migrating, and maintaining secure, high-performing, resilient, and efficient infrastructure for applications, scalable over time. Additionally, we facilitate the transformation to a cloud-native service delivery model.

Learn more

AWS security services

Swarms' AWS Cloud Security service enables organizations to develop and enact a proactive cloud security strategy, empowering them to launch new products and services on Amazon Web Services with confidence. Leveraging extensive experience, including

large-scale critical national infrastructure projects in government, we implement enterprise-level security within AWS. Our DevSecOps engineers and architects offer security assessments and construct assured platform landing zones to establish preventative, detective, and remediation measures within AWS.

Learn more

AWS Cloud Migration Services

Our service enables the smooth transfer of your operations, data, and applications from on-premises setups to the AWS cloud platform. We offer comprehensive assessment, planning, design, execution, and optimization phases for a seamless migration journey. Leveraging AWS best practices ensures a secure, well-architected, and user-friendly environment. Additionally, AWS Managed Services provide infrastructure management to expedite and automate cloud operations.

Learn more

Microsoft Dynamics 365 CRM service

Microsoft Dynamics 365 CRM is a cloud-based solution that empowers businesses to manage their customer relationships, sales processes, marketing campaigns, and service engagements effectively. With a comprehensive suite of tools, it fosters customer relationship development, sales acceleration, and superior customer experiences throughout the entire lifecycle.GetSwarm's offer a comprehensive range of consulting and support services for Microsoft Dynamics 365 CRM.

Learn more

Quality Assurance (QA) Services

At Get Swarms, we provide Quality Assurance (QA) Services to guarantee flawless product performance for businesses. Our skilled professionals use rigorous testing methods, both automated and manual, to detect and resolve any issues. Alpha Services for Cloud

GetSwarms' Beta service refines and enhances the solution developed during the Alpha phase, guaranteeing its readiness for launch. By building on Alpha's outputs, we ensure they adhere to accessibility standards and successfully pass service assessments. Our expertise lies in providing cost-efficient, continuous Beta iterations that consistently meet user demands, delivering significant value promptly and frequently.

Learn more

PROCESS METHODOLOGY

Our services aid customers in efficiently and meticulously planning and migrating their systems, applications, and data from existing on-premises environments to the cloud—whether private, public, or hybrid, whether on-premises or hosted. Throughout the planning phase, GetSwarms leverages our expert in-house Swarms to thoroughly assess, analyze, and document existing environments, offering guidance on elements ready for the cloud and identifying areas requiring attention prior to migration. We collaborate closely with our customers to determine suitable solutions aligned with current organizational objectives, capable of scaling according to needs. A primary objective of this planning process is to minimize the risk of downtime and data loss during future migrations. Following the planning phase, we develop controlled, step-by-step cloud implementation and migration plans, ensuring each phase instills confidence that apps, data, and infrastructure will transition securely and seamlessly.

Setup and Migration

We establish robust engagement with stakeholder groups, setting up a transparent communication schedule to guide and shape our delivery models while fostering a partnership approach from day one. Initially, we conduct comprehensive cloud readiness assessments with clients to understand business, technology, and user requirements. Through a structured communication program, we collaborate with client stakeholders tasked with executing our implementation and delivery programs, supporting ongoing innovation to craft a customized roadmap guiding delivery throughout the project or program lifecycle. While we follow a clear methodology, roadmaps are developed in consultation with client stakeholders to ensure alignment with requirements and organizational objectives.

Our project or program roadmap enables us to define a rigorous project implementation plan with well-defined, streamlined processes to support all cloud activities at each stage of delivery. Recognizing the importance of continuous improvement, we understand that as key deliverables become standard, we must persistently challenge the status quo, collaborating closely with clients to prevent service stagnation.

To ensure effective management of our service from the outset, we align subject matter experts with individual workstreams, collaborating with stakeholders during update

sessions and meetings to formally agree on strategy and address any issues as they arise. Our delivery team conducts regular internal checkpoints, focusing on tracking the progress of each workstream area of focus.

Continuous Improvement

Recognizing the significance of continuous improvement and innovation, we prioritize enhancing and optimizing delivery and service excellence for our clients over the short, medium, and long term. To ensure the success of our contracts, we understand the importance of integrating lessons learned at each stage of the contract period. GetSwarms acknowledges the necessity of providing clear and documented actions for improvement opportunities identified.

We value both quantitative and qualitative feedback in assessing our performance. Expected performance levels, where measurable key metrics can be recorded, are discussed and refined post-contract award, and established as Key Performance Indicators (KPIs). These KPIs are incorporated into our jointly agreed Service Level Agreement (SLA), thereby driving expected performance from the outset. Continual measurement of performance against all agreed metrics is conducted, with a detailed Management Information report formally presented as part of the agenda for formal service reviews and update sessions.

Throughout all our Cloud projects and programs, we collaborate with clients to monitor and measure the quality of our service, adapting our delivery structure as necessary to ensure consistent achievement of continuous improvement.

Disaster Recovery and Business Continuity

GetSwarms maintains a comprehensive Business Continuity Management System (BCMS) encompassing all structures and procedures for responding to crises or incidents. Within the BCMS are Business Impact Assessments (BIAs), internal Business Recovery Plans (BRPs), and Client Onsite Business Recovery Plans (COBRPs). In collaboration with our clients, we develop and agree upon a Client Onsite Business Recovery Plan (COBRP) that can be promptly activated following a crisis event affecting onsite service provision.

The COBRP guarantees that GetSwarms possesses sufficient infrastructure and provisions to respond effectively to a crisis event. It enables us to:

➢ Ensure the continuity of critical business functions for both our company and clients.
➢ Identify the essential resources required to sustain critical functions.
➢ Facilitate a seamless transition from normal to alternative modes of operation.
➢ Provide full support throughout all phases of business resumption.
➢ Adhere to the principles outlined in ISO22301.

Recognizing the uniqueness of each contract or account, we collaborate with our clients to establish specific recovery plans as needed. It is integral to our approach to ensure that the COBRP aligns with the client's approach and plans for Business Continuity.

SERVICE SUPPORT

GetSwarms offers continuous support to our clients for buyer hosting or software, whether developed in-house or provided by a third-party organization. We provide access to 1st-3rd line support through dedicated service desks, available during standard 09:00-17:30 hours or 24/7 as needed. All operators are based in the UK and undergo vetting processes relevant to client requirements.

Additional email or online ticketing support is available at an extra cost. Response times vary depending on the priority of the ticket, ranging from 1 hour to 24 hours excluding bank holidays, tailored to individual client needs.

Online ticketing support accessibility	WCAG 2.1 AAA
Phone support is available:	24 hours, 7 days a week
Web chat support is available	24 hours, 7 days a week
Web chat support accessibility standard	WCAG 2.1 AAA
Web chat accessibility testing	All our software undergoes accessibility testing in accordance with our global equality and diversity standards. This testing encompasses additional features tailored for users

	with sight or hearing impairments, ensuring inclusivity and usability for all.

Training

Our training programs are tailored to individual needs, typically comprising a mix of in-person sessions and online training, accessible to all users but customized to their specific roles. Our online programs offer a variety of elements such as activities, training resources, webinars, and instructional videos. Detailed documentation is readily accessible online.

Additionally, we can assist client stakeholders in delivering formal training sessions through webinars or coordinated classroom training. If on-the-job and floor walking (user) activity training is necessary, we have the capability and capacity to support this provision.

Ongoing Support

Throughout all our Cloud Services, GetSwarms provides comprehensive end-to-end training covering all aspects of the services we offer, including:

- ➢ Buyer hosting or software
- ➢ Hosting or software provided by our organization.
- ➢ Hosting or software provided by a third-party organization.
- ➢ Explanation of how the support service operates.

We employ robust, industry standard ITIL service management across all our engagements, ensuring rigorous maintenance of delivery and engagement quality. Each customer is assigned a dedicated service delivery manager as the primary point of contact in case of any issues. Our in-house expert consultants are also available to address any uncategorized service faults or irregular failures once the environment is live. Prior to the go-live phase, our team is always accessible and actively resolves any faults as they arise.

To complement our service, we offer a dedicated cloud self-service portal that allows you to log and track incidents from any location or device. This portal includes dynamic dashboards and a customer-centric knowledge base, facilitating rapid resolution of common issues. Our support services are flexible and scalable, enabling buyers to adapt quickly to market changes. We provide both standard and customized Service Level Agreements (SLAs), delivering KPI-driven operational reporting through GetSwarms online ITSM portal and interactive service dashboards.

SERVICE LEVELS

We implement a strategic method in developing service levels, identifying target performance levels and timelines, and continually refining them based on measurable service metrics to ensure transparency throughout the entire service experience. Targets in areas where key metrics can be quantified are designated as Key Performance Indicators (KPIs), which are then integrated into any finalized SLA to ensure expected performance standards are established from the beginning.

In addition to defining delivery specific KPIs, we also establish strategic goals and targets aligned with client procurement objectives, thereby fostering contract enhancements and efficiencies throughout the project or program lifecycle.

Our service operation is built to ensure the rapid scaling of operations in line with client demand, operating a
24/7 facility for clients demanding 'around the clock' and 'follow the sun' services.

Operating hours	9-5, Mon-Fri
Enhanced Service	9-5, 7 days a week
Premium Service 24/7	P1 IRT (Initial Response Time) 15mins, 4-hour fix P2 IRT (Initial Response Time) 30mins, 8-hour fix P3 IRT (Initial Response Time) 45mins one business day fix P4 Service/Change Requests Only IRT (Initial Response Time) 1 hour

Contract Terminations

GetSwarms collaborates with our clients to customize our standard terms and conditions to align with the unique requirements of each client organization. Our terms and conditions are specifically tailored to accommodate the nature of the project or service engagement, ensuring complete adaptability in accordance with client service objectives. Specific terms related to contract termination clauses are negotiated and finalized following contract award, ensuring mutual agreement and clarity.

Pricing

The price of our services is contingent upon customer requirements, with these factors exerting significant influence on the overall pricing structure. GetSwarms offers various managed services models, including pricing based on factors such as per device, per user, and fixed monthly rates. Each customer is assigned a dedicated service management representative to oversee the service and facilitate ongoing continual service improvement.
