3 PRINCIPLES

We aim to leverage the skills from our centre of excellence based in UK/Europe. By using local consultants who are experienced we are able to reduce the total number of consultants required

e.g. where multiple offshore based consultant are required over a period of extended time, we are able to provide expert consultants who have local knowledge and are able to understand the business processes and impacts in order to provide shorter timelines and reduce the total number of consultants required

4 SERVICE DESCRIPTION

YOUR SUPPORT MODEL
TO ENABLE YOUR BAU
TEAM TO TRANSITION
INTO BAU ACTIVITIES

8 METHODOLOGY: MKSK ORACLE METHOD (MOM)

- An Oracle project requires more than a technical focus to achieve investment returns and to be successfully embraced by the organisation. Recognising this as one of its key tenets, the MKSK Oracle Method (MOM) establishes a heavy focus of capturing quick wins and success, infusing the business case throughout a project, and obtaining the organisational sponsorship and change management levers to drive success. From a technology standpoint, the MOM considers the application architecture and development tools of Oracle applications and provides approaches to accelerate the overall implementation schedule, while effectively managing risk.

9 MKSK ORACLE METHOD (MOM)

- The MKSK Oracle Method (MOM) consists of the five core phases of OUM's Implement methodology, plus the Project Start-up and Project Close phases from MKSK's Project Management methodology. The lifecycle and gateways are described in the slide below:

10 MKSK ORACLE METHOD KEY ASPECTS AND BENEFITS

- Employs interactive business modelling workshops to expose users to the system, validate system processes and configuration through prototyping, and secure early buy-in to the design;
- Emphasises business process re-engineering around the package-enabled practices within the Oracle application, thereby encouraging a “vanilla” implementation to minimise ongoing maintenance and upgrade costs;
- Uses Oracle’s business configuration model and associated development tools for rapid development of reports, customisations, interfaces, and conversions;
- Provides an iterative and incremental design, develop and test process that incorporates testing and validation throughout the project lifecycle, providing a higher degree of quality assurance and early user feedback loops – rather than traditional methods that wait towards the end of a project to test for quality and user acceptance;
- Increases project efficiencies by integrating accelerators and selected tools into each phase of the methodology, including templates and practice aids; and
- Applies the same method to implementations and upgrades and recognises the varying degree of complexity in each situation.

II SERVICE DELIVERABLES

As the On Going Support service is dependent on your specific requirements the deliverables are not defined here. We will agree with you the actual deliverables as part of your service agreement

All of Oracle Consulting activities are based around our MKSK Oracle Method (MOM). This allows us to draw on an extensive set of accelerators, which will be used as the basis for our deliverables.
