About OSO

Our mission is to help teams build event driven applications on Apache Kafka, enabling real-time access to your data and introducing meaningful innovations that drive business growth. Our developer-first culture, combined with our cross-industry experience and battle-tested delivery methods allow us to deliver the most impactful solutions through increased efficiency using our expertise in completing similar assignments for other large automotive institutions.

Founded in 2017, we set out to create a consultancy where customers get the benefits of a small specialist team that are dedicated to their success. As a team of engineers with a combined circa 50 years of expertise in Apache Kafka, event driven architecture and distributed platforms in general. Our vision is to enable businesses to greatly benefit from the power of these technologies which is why we have built a team of Subject Matter Experts (SMEs) who are solely focused on Apache Kafka.

Since being formed, we have worked with a number of well-established public sector clients in the UK. Case studies are available on our website at:

<https://oso.sh/customer-stories/>

We are distributed computing experts and pride ourselves on being event driven technology evangelists. We are passionate about enabling businesses to make real time decisions.
