

Business Continuity Services (ISO22301)

Empower your organisations resilience through strategic planning with our tailored business continuity services.

What is Business Continuity Management?

Business continuity Management (BCM) refers to maintaining business functions or quickly resuming them in the event of a major disruption, whether caused by a fire, flood or malicious attack by cybercriminals. A business continuity plan outlines procedures and instructions an organisation must follow in the face of such disasters; it covers business processes, assets, human resources, business partners and more. Business continuity planning involves developing a practical plan for how your business can prepare for and continue to operate after an incident or crisis.

A business continuity plan will help you to:

- identify and prevent or reduce risks where possible
- prepare for risks that you can't control
- respond and recover if an incident or crisis occurs

CyberCX Service Offerings

BCMS Implementation

Design and implement a BCMS in alignment with ISO 22301 through to certification.

BCMS Jumpstart

Design and implement a BCMS in alignment with ISO22301 without certification

BCMS Internal Audits

Management system internal audits against the requirements of ISO 22301.

ISO22301 Gap Analysis

Gap analysis against the ISO22301 standard.

BC Exercise

As part of our services, we'll develop a comprehensive Business Continuity Test Plan and a BCM Test Report Template.

Service Benefits

ISO 22301 alignment offers numerous benefits for organisations in ensuring business continuity management (BCM). Firstly, it enhances resilience by systematically identifying potential threats and vulnerabilities to critical business processes, allowing proactive measures to mitigate risks and maintain operations during disruptions. This preparedness minimises downtime and financial losses, safeguarding the organisation's reputation and customer trust.

Secondly, ISO 22301 alignment promotes efficiency and cost-effectiveness through streamlined BCM processes. By establishing clear roles, responsibilities, and communication channels, organisations can respond swiftly and effectively to incidents, reducing recovery time and resource wastage. Additionally, regular testing and evaluation of BCM plans ensure their relevance and effectiveness, further optimising operational continuity.

Lastly, ISO 22301 alignment enhances regulatory compliance by demonstrating a commitment to robust BCM practices. Compliance with international standards not only meets regulatory requirements but also fosters trust among stakeholders, including customers, partners, and regulators. This trust is invaluable during crises, helping organisations navigate challenges and emerge stronger from disruptions. Overall, ISO 22301 alignment strengthens organisational resilience, improves operational efficiency, and enhances regulatory compliance, positioning businesses for long-term success in an unpredictable environment.

Typical Project Lifecycle

CyberCX offers a range of services relating to the ISO 22301 standard. For simplicity these have been consolidated into this single service description. The following services can be offered by CyberCX

Why CyberCX?

When it comes to security you need an experienced partner. CyberCX is a leading independent cyber security services company.

CyberCX delivers end-to-end cyber security services and the best cyber security talent with the most comprehensive range of cyber security services to business, enterprise and government.

Contact us to find out how CyberCX can
boost the cyber security skills of your entire
organisation.
