

Incident Response Planning

Plan how your organisation will respond and recover from cyberattacks

CyberCX will work with your executive leadership and technical teams to develop a comprehensive Incident Response Plan that reflects your organisation's specific cyber security arrangements and requirements.

Incident response planning is a key part of organisational resiliency. It documents what to do and who will take action if your organisation is affected by a cyberattack. A good Incident Response Plan can answer the following questions:

- ▶ During an incident, who is responsible for what?
- ▶ Who can we contact for help?
- ▶ What tools and other resources are critical during an incident
- ▶ What do we need to report on to maintain compliance obligations?

The best Incident Response Plan ...

Prepares your organisation to respond

Cyberattacks are unfortunately all-to-common and can be devastating to an organisation. CyberCX supports your team to proactively plan for what you will do when attacked.

Documents who is responsible for what?

The aftermath of a cyberattack is highly stressful. Clearly documenting roles and responsibilities supports your team to respond quickly and effectively when attacked.

Supports compliance with security frameworks

Most industry frameworks and standards (e.g. ISO27001, NIST CSF and NCSC CAF) require organisations to have an Incident Response Plan in place.

Meets legal and regulatory requirements

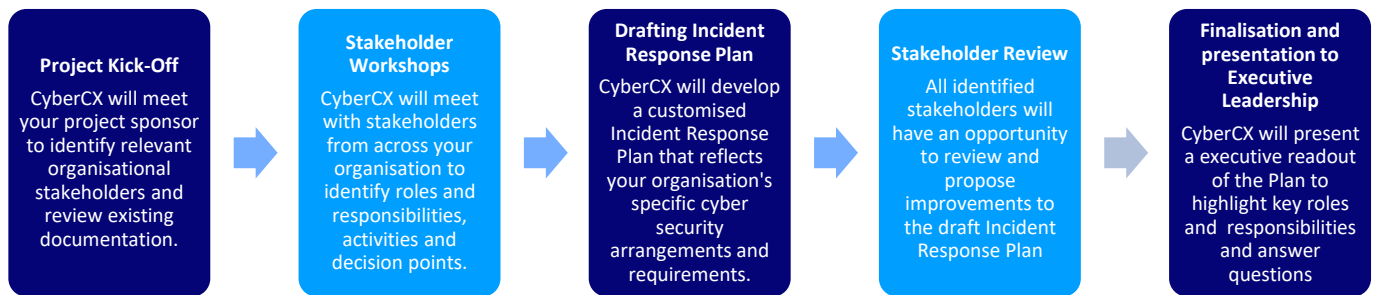

Many sectors and industries are now subject to legal and regulatory requirements around their response to cybersecurity incidents. Having an Incident Response Plan is the first step in meeting those requirements.

Supports organisational resilience

Good Incident Response Plans can help your organisation respond to and recover from incidents more quickly.

Incident Response Plan Delivery:

CyberCX Capabilities you can rely on

Unmatched experience

CyberCX responds to +300 cybersecurity incidents per year. We leverage insights from these incidents to help organisations better plan and prepare for future incidents.
