

# Security Testing and Assurance

Securing your network and applications begins with identifying vulnerabilities.

## Penetration Testing

Expert support to test and uncover issues and risks across applications, cloud, networks, systems, and devices with practical remediation advice.

We provide penetration testing for:

- Web Applications
- External Networks
- Internal Networks
- Mobile Applications
- Wireless Networks
- SCADA / OT and IoT

## Application Security

Comprehensive application security services, reviews and assessments to ensure your application code is strong enough to withstand global cyber threats.

## Vulnerability Assessments

Get a high-level and cost effective technical and hands-on assessment of your security posture, with a focus on vulnerabilities that can impact your organisation or solution.

## Technical Assessments

Gain a holistic understanding of the potential impact an attacker could have on your cloud and IT infrastructure, operations technology, IoT solutions, and more.

## Adversary Simulation

Expert adversary simulation and red team testing of your digital, physical and workforce environments with a simulated cyber-intrusion using real-world attack methods, plus guidance on how to assess vulnerabilities and safeguard against future attacks.
