**Our Company:** 2MG Solutions is an NHS and Crown Commercial Services-approved system integrator with experience in application transformation and delivery of digitalisation into the NHS. We dedicated the last 9 years to supporting NHS initiatives' delivery within England, covering compliance and UK regulatory system requirements.

**Customisation:** Our IT and digital services can be customised and scaled according to the company's requirements. Pre-defined, per-user price allows our customers to keep control of all costs. Customised pricing is based on the individual scope and objectives, scale of migration, selected cloud services, and ongoing support requirements. The preliminary planning timeline for each service outlines a general Agile delivery. A specific Implementation Plan is to be developed per each case individually.

## Why Us ?

We are ISO/IEC 27001 and ISO 9001 certified.

The ISO 27001 certification of Information Security Management Systems demonstrates our ability to manage the security of our information systems and business-critical information for operational continuity and data protection.

## Discovery Service

---

Discovery Service (DS) aligns with NHS priorities by facilitating the thorough assessment of technology, supportability, and governance from inception to retirement. This includes planning, development, testing, deployment, and maintenance, ensuring applications and solutions in scope meet NHS requirements for data security and regulatory compliance.

## Features

---

- All technology requirements are identified and documented.
- Reporting and dashboards are included.
- Technology discovery, supportability, and deployment planning.
- Efficient way to identify potential blockers and hidden costs.
- Ensuring security standards are communicated to vendors and enforced early in the process.
- Proven methodologies for technology assessment and governance by experienced experts.
- Deployment of technological solutions across various platforms.
- Implementation plan including security protocols, data protection, and compliance.

## Benefits

---

- Delivers technology enablement, consolidation, automation, compliance.
- Enables strategic alignment of technology infrastructure to specific NHS objectives.
- Ensures security compliance by identification and removal of potential security challenges or non-compliant areas.
- Lowers total cost of ownership for technological assets.
- Reduces risk through cost-effective and timely technology evaluation services.
- Reduces cost and management overhead through technology rationalisation.
- Delivers high-level project plan with a list of key milestones, in scope and out of scope definition.
- Outcome and deliverable-based – ensuring that NHS benefits are achieved.
