

Acquisition Manager Pricing

Acquisition Manager helps organisations evaluate complex information from bureaus and other sources and enables faster, consistent, automated citizen decisions at scale. We do this by providing business process automation, data insight, and analytics that deliver accurate, cost-effective decisions to onboard citizens automating your strategy in terms of risk fraud and regulatory requirements. The solution is fully configurable (using the Configuration Studio) to meet the organisation's needs. TransUnion typically provides a fully-configured solution, which after training can be managed and enhance by the organisation.

The pricing has two components, a setup fee covering the design, build and testing phases of the solution and an annual service fee which includes a licence to use, AWS SaaS, maintenance, and support.

The setup fee is based on a per person day rate as per SFIA Rate Card (the blended day rate is £1,500). The number of professional services days required to deploy the Acquisition Manager solution is dependent on the size and scope of the deployment. A full quote will be prepared once a scoping study has been completed and an agreed solution outline document has been agreed. Typical entry level pricing below is representative of a "standard configuration", which may include the following:

- Access via our standard REST API web service
- Access to TransUnion's real-time data services (costs for data services used are excluded)
 - o Credit report (TruVision)
 - o Affordability (Affordability Report 4)
 - o Identity and verification (TruValidate); and customer PIN (DataDNA)
- A single business strategy (policy rules/risk, affordability, and fraud scores)
- Strategy Configuration Studio
- Case management, with data viewer
- Management information extracts
- An AWS SaaS solution
- Support and maintenance
 - o Standard support Monday-Friday, 07:30-18.00

Setup fee - between £150K to £250K depending on complexity of requirements and scope.

Annual service fee - between £180K and £230K depending on complexity of requirements and datasets being incorporated. This is based on a five-year contract terms, complexity, and confirmation of expected volumes.

All the prices quoted in this document are exclusive of VAT.
