Thinking Ahead
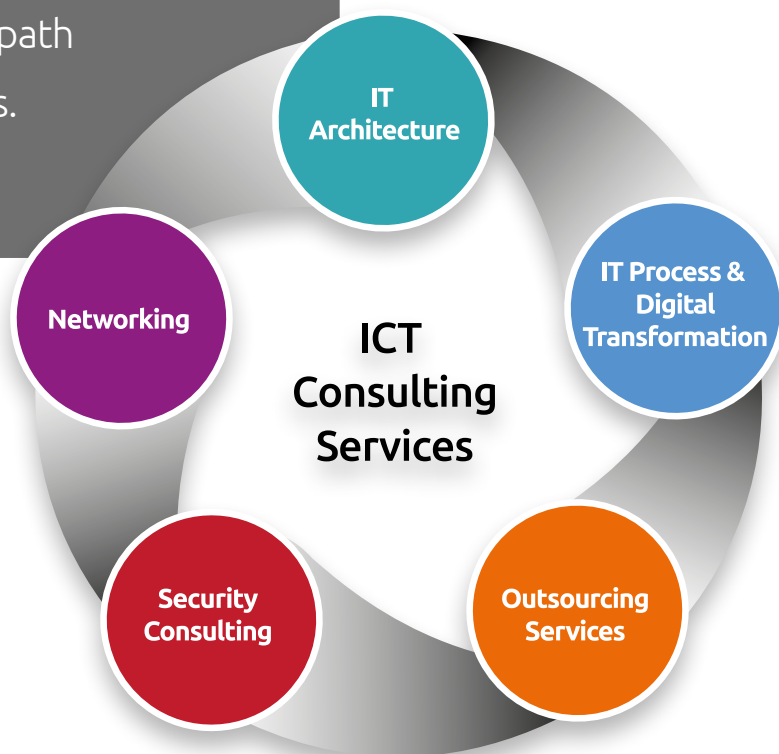

Advanced ICT Consulting Services

Imagine a future in which your IT will run seamlessly, at maximum efficiency and low costs. A future that leverages your organization and reveals the strength of its systems. This ideal environment is closer than you think. Our unique ICT professionals are here to support your efforts towards the evaluation of the market offerings and the mapping of technology against business requirements and trends. Target is to enable digital transformation through a range of services that will highlight all opportunities and challenges related to your ICT environment and assist you in discovering the best path to fulfill your plans.

Business sustainability and acceleration is critical and emerging. Amid the Fourth Industrial Revolution, it is imperative for businesses to change the way they market, sell, support, and operate in order to engage the new digital-enabled customer.

ICT executives are ones that can drive the transformation journey through leadership, expertise, agility and efficiency. Taken from the typical source of information, such as international analysts market and leading technology vendors' reporting, the insights and information is out there, yet retrieving them requires valuable time and money.

UniSystems advanced consulting services aim to offer a clear view study acting as an independent international consultant, commercially and technically proven through real references. The aim will be to assess the real utilization and the value of assets, recommend changes, propose future enhancements and align the existing infrastructure and future investments with the needs of business applications.

Service Offerings

ARCHITECTURE ASSESSMENT

We analyze and evaluate the current state, identify the optimization points, risks & opportunities to develop a near future enhancement & optimization plan and long-term comprehensive technology roadmap for Enterprise & Application architectures, Data Center & Virtualization, Security, Network & Enterprise Mobility.

PM AS A SERVICE (PMAAS)

Unique offering for delivering service excellence in Project & Programme management. Provide required guidance and advices by adopting scalable, structured and established methodologies to plan, control and monitor service performance against agreed KPIs.

TESTING AS A SERVICE (TAAS)

Provide required guidance & advices for effectively implementing the right testing strategy, planning, preparation & execution within the defined timelines and budget. Or simply, undertake the whole testing procedure on behalf of our customers.

PROOF OF CONCEPT

Proof of Concept projects are the very essence of a smooth implementation: their design, execution and delivery reveal key technology capabilities and identify the Minimum Viable Product (MVP) scope to ensure viability of implementation.

SOLUTION ARCHITECTURE

Evaluation of client's specific business & technical requirements leads us to the development of an end-to-end solution architecture through identification of major integration points, transformation opportunities and possible risks. We commit to maximize efficiency and reduce costs in an environment that meets client needs: on-premise, cloud, or hybrid.

PRODUCT/VENDOR SELECTION

Can't decide between vendors? We're here to help on the vendor selection process through extended analysis of the market, requirements, use cases, and RFI/RFP development.

CONSULTING ON DIGITAL TRANSFORMATION

If digital transformation is the answer, we are here to outline the path towards digital leadership through effective technologies that enable business innovation.

DATA AND CONTENT MIGRATION

We agree that data & content migration is challenging and we master the game. We can plan application, data and content migration from legacy systems while identifying and mitigating risks and factors that result to a seamless, timely migration and/or application consolidation project.

BUSINESS PROCESS REENGINEERING

Being at the forefront of information technology, we know how to best utilize it in order to streamline and optimize interactions and processes with employees, partners and customers.

CLOUD TRANSFORMATION ROADMAP

Nowadays, there is no information technology roadmap without cloud adoption strategy. We can assist you in elaborating a tailored and comprehensive cloud adoption approach that suits your business while facilitating skills and knowledge development for the people involved.
