

MGENIOUS

We help organisations to thrive by enhancing collaboration to increase productivity.

Making Teams Work Better

Project Management Service

Our team of programme and project management consultants are highly skilled and will help your organisation successfully and efficiently deliver transformational change.

Typical initiatives we manage are:

- M365 implementation and migration projects.
- End User Computing (EUC) transformation and upgrade programmes.
- Teams Calling implementation and migration projects.
- Change management planning and implementation.
- Cloud application migrations and change projects.

We can either work in an advisory capacity, supporting your own in-house team to ensure a successful transition into service, or we can provide complete teams to deliver specific deliverables.

This can include helping you navigate key strategic decisions and can include managing your procurement activities.

Regardless of the role we take, we will deliver on time and importantly on budget.

We utilise recognised programme and project management techniques – Agile, Prosci and Prince 2 to name a few. Our understanding of the theory is evidenced by a range of qualifications, from MAs through to Registered Project Professionals, and we are members of the Association for Project Management.

Example Projects – Mgenious has completed major programmes and projects for:

Large Social Housing organisation: Programme of projects for over 2,500 staff, including a full EUC transformation project, M365 implementation and Teams telephony implementation, migration and integration with a full contact centre solution.

Central government: Major M365 transformation project.

London & South-East local authorities: M365 transformation projects with multi-stakeholder and supplier management.

Mgenious Services and Benefits

Our experienced team of Project Managers specialise in cloud services and all aspects of the project lifecycle. We will work with you to:

- Quickly get up to speed with any project environment.
- Design methodology to best suit project aims and objectives.
- Set up project governance and define reportable project benefits.
- Effective team development and supplier management.
- Improve process control and maturity.
- Integrate management teams in fully controlled project environments.
- Accurate understanding of project status and project management requirements.
- Implement and transform performance and organisational success.
- Engage the stakeholder community.
- Exceptional service transition from project team to BAU.

Mgenious Project and Programme Management Services:

- Project management and leadership, using agile and waterfall methodologies.
- Investment appraisals, business cases, business planning and strategic alignment.
- Project risk, assumptions, project controls and health checks.
- Interactive project planning and scheduling.
- Stakeholder management and team-building.
- Dashboards, reporting and board management.
- Project handover and service improvement.
- User transformation, troubleshooting and service Transition

Innovate

Transform

Envision

Mgenious is a UK based consultancy with nationwide coverage. We have extensive experience of working with high-profile clients across a number of sectors, including:

- Social Housing
- Central Government
- Local authorities
- Non Government Organisations
- Government agencies
- Retail, nuclear and other sectors

Our consultants are experienced, highly-qualified and trained in the relevant techniques for their skillsets. Our understanding of the theory is evidenced by a range of qualifications, from MAs through to (APM) Registered Project Professionals.

More importantly, we know how to put the theory into practice, when to adapt it and when to try something new - so that we can deliver effective and transformative programmes and projects.

We look forward to discussing your programme or project management details and creating a bespoke set-up and team to deliver on your needs.

Mgenious Solutions are an experienced Microsoft partner with a focus on cloud services, collaboration, productivity, automation, security, and governance.
