

MGENIOUS

We help organisations to thrive by enhancing collaboration to increase productivity.

Making Power Platform Work Better

Power Platform Review– Service Definition

Have you ever stopped to think about the number of processes and manual tasks your team is repeating each day?

Excel macros, self-developed automations and applications that are so old but yet so critical to your organisations way of working.

At Mgenious, we have developed a process and assessment service that can look at your day to day activity using your M365 tools and Microsoft process automation toolkits – including co-pilot to review your application estate and assess which apps and processes may be most appropriate for transition to M365 Power Platform Apps (Power BI, Apps, Pages, Automate.)

We will work with your team to look for options and target a proof of concept example and ensure that your team have the right governance models, environment strategy and training to become self-sufficient and continually improve the new Power Platform applications that are created.

We also offer audits against other aspects of M365 such as:

- Teams Audits
- M365 License Review
- Cyber Essentials Plus Reviews

Mgenious Power Platform Services

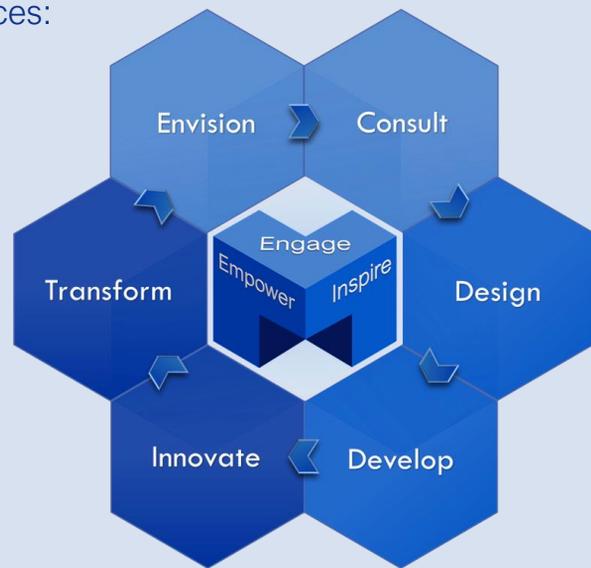

In addition to the Power Platform Review Mgenious also offer wider consultancy and app development services:

Power Platform Opportunity analysis including

- Strategy
- Advisor/consultant
- Supplier Management
- Risk & Compliance

We start by finding out what keeps your business running, how that fits into your company vision and what your approach to risk is.

From there, we build a targeted, bespoke solution which is designed to protect your business's most valuable assets and apps, whilst leaving you free to get on with work, unhindered.

The Mgenious project engagement cycle

Mgenious Solutions are an experienced Microsoft partner with a focus on cloud services, collaboration, productivity, automation, security, and governance.

Microsoft
Partner
