iDataMaze G-Cloud Pricing Approach

iDataMaze services listed on the G Cloud 14 may be procured through a number of ways.

1. Time and Materials – This arrangement, standard in nature, operates under the SFIA rate card and mandates the provision of services as delineated within G Cloud 14. The client will be invoiced monthly, contingent upon the volume of work completed.
2. Fixed Price – Under this agreement, the parties will concur on a fixed sum for services rendered, derived from an estimated scope of work. Invoicing will be executed incrementally, aligned with the achievement of specified deliverable milestones.
3. Fixed Capacity – This model stipulates the engagement of a predetermined number of resources from the iDataMaze core team for a defined period, irrespective of the service or project outcome.
4. Outcome-Based Pricing – Procurement of services under this framework is contingent upon the attainment of specified outcomes associated with the service/project deliverables.

Pricing for this service is determined by the SFIA rate card, which is detailed in a separate document within the catalogue.

We also provide volume discounts for larger projects. The specifics of these discounts, including type and range, will be established when the request is made, considering the project's scale and duration. Further details on these discounts are available upon request.
