Goldline Consultancy Ltd

Goldline Consultancy Ltd delivers senior cyber governance and AI governance programme implementation for UK regulated mid-market organisations, SaaS scaleups, and defence supply chain clients. Every engagement is led directly by the SC Cleared founder, with no junior consultant substitution at any stage of delivery.

Selected Delivery Organisations

13 years of practitioner-led delivery, Engagements span defence prime contractors, global technology enterprises, and central government regulatory bodies.

 JOSCAR Registered · Cyber Essentials Certified · Companies House 10901798

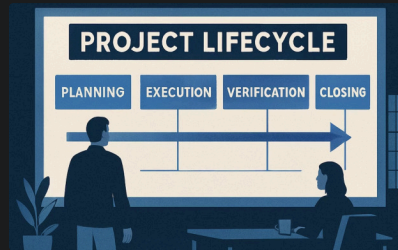

Core Compliance Programmes

Goldline's structured programme portfolio addresses the principal governance, certification, and regulatory obligations facing UK regulated organisations. Each programme is delivered by the senior practitioner from inception through closure.

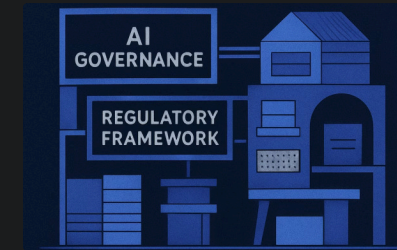

The Goldline Method: Accelerated Compliance

12-week dual-framework programme delivering ISO 27001, SOC 2, and GDPR readiness simultaneously. Fixed scope, fixed fee. One gap assessment maps to both ISO 27001 Annex A and SOC 2 Trust Services Criteria. A single evidence library serves both frameworks, eliminating duplication. ISO 27001 certification through accredited body; SOC 2 Type II attestation via Thoropass Assurance partnership.

ISO 27001 Implementation

Structured programme for UK regulated mid-market and defence supply chain organisations pursuing ISO 27001 certification. PECB Lead Implementer methodology across four phases: Define & Establish, Implement & Operate, Monitor & Review, and Maintain & Improve. Senior practitioner delivery from initial gap assessment through Stage 2 audit support.

ISO 42001 Implementation

AI Management System development for organisations operationalising AI governance. Calibrated to UK regulated industries facing EU AI Act exposure and the emerging UK AI regulatory framework. Where ISO 27001 is already in place, the programme integrates directly with the existing ISMS, capitalising on approximately 60% management system overlap to accelerate delivery.

Specialist & Ongoing Service Programmes

The Goldline Method: SOC 2 Sprint

8-week SOC 2 Type I readiness programme for SaaS scaleups facing US enterprise procurement pressure without current EU enterprise pipeline. Delivered through Thoropass Assurance attestation. A single-framework velocity entry point designed for organisations that require credible attestation rapidly and cannot absorb a full dual-framework programme at this stage.

GDPR Gap Assessment

Structured assessment of UK GDPR and EU GDPR compliance posture, producing a prioritised remediation roadmap calibrated to the organisation's risk profile and regulatory exposure. Covers data mapping, lawful basis, controller–processor obligations, and documented accountability requirements. Applicable to organisations subject to ICO supervision or cross-border data transfers.

CE Plus Readiness

Cyber Essentials Plus assessment preparation for organisations facing defence supply chain or regulated industry CE Plus requirements. Senior practitioner-led technical assessment preparation and remediation across all five Cyber Essentials technical controls, with particular attention to scoping decisions that affect certification outcomes and procurement eligibility.

DCC Programme Management

Defence Cyber Certification programme management for defence supply chain organisations across DCC L1, L2, and L3. JOSCAR registered. SC Cleared founder delivery throughout. Engagement structured to meet MOD supply chain cyber assurance requirements, with full governance documentation aligned to defence programme controls.

vCISO Retainer

Ongoing strategic security and governance leadership for organisations requiring senior cyber leadership without a permanent executive hire. Monthly retainer engagement model providing board-level advisory, security strategy, supplier assurance, policy governance, and incident response readiness. Named senior practitioner throughout; no rotation or handover gaps.

Programme Capability Mapped to G-Cloud 14 Specialist Roles

The following mapping provides G-Cloud 14 buyers with a clear procurement reference, aligning Goldline programme delivery capability to the defined specialist roles within the framework. Each role is fulfilled directly by the senior practitioner.

G-Cloud 14 Role	Goldline Programme Capability
Programme Manager	End-to-end governance programme leadership: ISO 27001, ISO 42001, DCC, and Accelerated Compliance. Fixed-scope delivery management with executive reporting.
Solution Architect	ISMS architecture, AI Management System design, SOC 2 control environment structuring, and integrated dual-framework evidence architecture.
Project Manager	Structured phase delivery across all Goldline programmes. PRINCE2 Agile, PMP, and hybrid methodology applied to certification and compliance workstreams.
PMO Manager	Governance, reporting, and controls establishment for multi-workstream cyber and AI programmes. Applicable to DCC and vCISO retainer engagements.
Cloud Engineer	Technical control implementation and cloud-scoped gap assessment across CE Plus, SOC 2 Sprint, and ISO 27001 programmes involving cloud infrastructure.
Test Manager	Assessment methodology oversight for CE Plus Readiness and SOC 2 Type I readiness programmes. Technical control evidence verification and audit preparation.
PMO Coordinator & Analyst	Evidence library management, risk register maintenance, and compliance tracking across ISO 27001, ISO 42001, and GDPR Gap Assessment engagements.
Test Analyst	Control testing, gap analysis, and remediation tracking within CE Plus, SOC 2, and ISO 27001 audit preparation workstreams.

Practitioner Credentials & Engagement Model

Professional Credentials

- ISO 27001 Lead Implementer (PECB)
- CISSP (ISC²)
- PMP (PMI)
- PRINCE2 Agile Practitioner
- ITIL · SAFe 6 Agilist · CSM
- CMgr · APM PMQ
- CompTIA Security+
- 6× Microsoft Certified
- SC Cleared
- Exec MBA AI Specialism (UH, Dec 2026)

Engagement Model

Availability

1-5 days per week. No minimum commitment required.

Mobilisation

Within 5 working days of call-off award, subject to clearance verification.

Hours

Standard: 09:00-17:30. Flexible by agreement with the client.

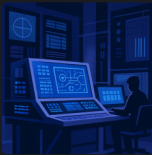

Methodology

Agile, Waterfall, PRINCE2, or hybrid per programme requirements.

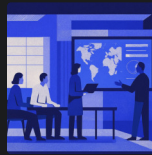

Selected Engagement Experience

The following anonymised engagement summaries illustrate the breadth and seniority of delivery. Client names are withheld in line with confidentiality obligations. References are available on request, subject to NDA.

UK Defence Sector

Senior cybersecurity programme delivery embedded within a UK defence prime contractor. The engagement coordinated multi-supplier delivery across cyber and AI workstreams, operating under defence governance controls and classification constraints. The programme was delivered on time, with full governance documentation maintained throughout. Scope encompassed programme management, risk governance, and cross-supplier assurance coordination.

Global Technology Enterprise

Senior Technical Programme Manager leading a geographically distributed team delivering mobile application security review services. The engagement required structured release engineering, cross-timezone programme coordination, and executive stakeholder reporting across multiple organisational levels. Delivery cadence was maintained across international time zones with no loss of programme control or reporting integrity.

Regulated AI Compliance

Designed and deployed an AI-powered regulatory compliance tool enabling complex UK regulatory content to be queried in natural language. Reduced compliance research time from several hours to seconds. Deployed with full source traceability and audit readiness, ensuring outputs could be relied upon within regulated governance processes. Demonstrates production AI deployment capability in a compliance-critical environment.

Why Buyers Select Goldline

Six structural characteristics differentiate Goldline from both boutique cyber consultancies and large programme delivery firms operating under tiered staffing models.

1

SC Cleared From Day One

Active security clearance held. No vetting queue, no mobilisation delay. Buyers requiring cleared resource can proceed directly from call-off award to engagement commencement within 5 working days.

2

Credentialed Practitioner Delivery

ISO 27001 Lead Implementer (PECB), CISSP, PMP, and 8 further professional credentials applied directly to client engagements. Certifications are held by the practitioner who delivers the work, not cited in proposal copy alone.

3

No Junior Substitution

No Big 4 markup. No tiered delivery model. The senior practitioner who scopes the engagement executes the engagement. Buyers have direct access to the practitioner throughout — not via account management layers.

4

Single Named Lead

No team rotation. No knowledge transfer gaps mid-programme. The same named individual leads from initial scoping through programme closure, maintaining full context and continuity of governance documentation.

5

Production AI Capability

AI tooling deployed in regulated environments. Advisory on AI governance and ISO 42001 implementation is grounded in delivery experience rather than theoretical frameworks, with demonstrable production deployment in compliance-critical contexts.

6

Defence Supply Chain Registered

JOSCAR registered for defence supply chain procurement. Cyber Essentials Certified. Active UK regulated industry delivery across central government, defence prime contractors, and financial services organisations.

Call-Off
Award

Mobilisation

Delivery

Goldline operates a straightforward call-off model under G-Cloud 14 (RM1557.14). Procurement is conducted directly through the Digital Marketplace. Upon award, clearance verification is confirmed and the senior practitioner mobilises within five working days. All programmes follow structured phase delivery with documented governance and executive reporting appropriate to the buyer organisation's governance requirements.

- ① All engagements are governed by Goldline's standard terms of engagement, aligned to G-Cloud 14 framework terms. Methodology — Agile, Waterfall, PRINCE2, or hybrid — is confirmed at scoping in accordance with the buyer's programme governance requirements.
