

G-CLOUD 14 SERVICE DESCRIPTION

About SCW Geospatial Service

SCW Geospatial Service support health sector organisations with geospatial consultancy services and bespoke hosted interactive mapping, visualisations, analysis, and insight tools to make informed decisions on service planning.

We empower partners to address healthcare challenges in improving population health outcomes through innovative solutions leveraging the power of location-based insights, from primary health care services delivery to regional and national policy formulation.

WORKING WITH US

All Geospatial Service consultancy services and hosted interactive applications are bespoke and specific to individual customer requirements and scope of challenges to be addressed. We work collaboratively with our customers in requirements gathering, solution scoping and application development in ways that ensure the tailored tools and services add value and effectively address healthcare challenges in improving population health outcomes.

Planning elements include and cover:

- Requirements gathering.
- Hosted solution, scoping and specification.
- Data sourcing, data quality validation and modelling.
- Application design, development, and hosting.
- User access, training and ongoing account management.

QUALITY ASSURANCE STANDARDS

We are an ISO9001 accredited Service
