What the service is

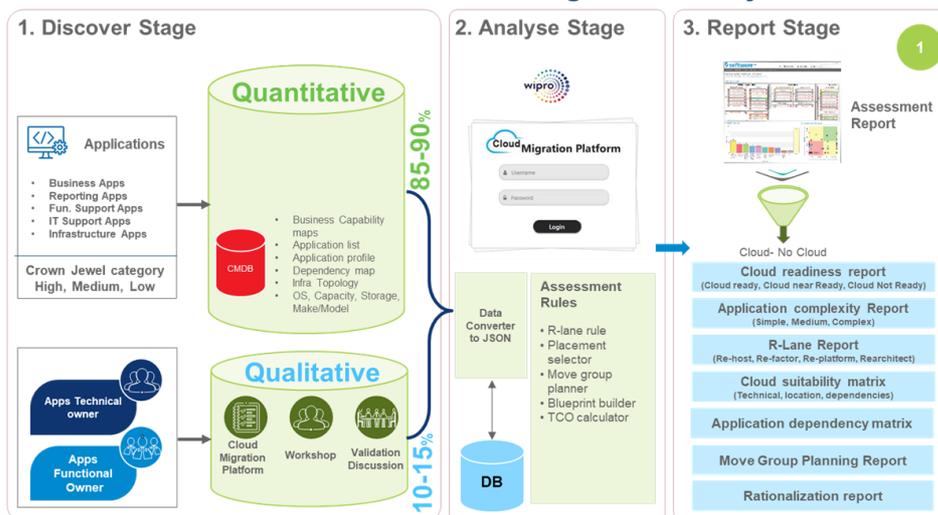

Through Wipro's Applications Discovery & Assessment service, we assess customers applications & infrastructure portfolio & create cloud migration/modernization strategy for each application to adopt cloud in best possible way.

Wipro's flagship solution Cloud Studio helps automate application discovery & assessment by using Wipro IPs & partner tools under single integrated solution. the outcome of this will be a cloud readiness heat map, remediation strategy & transformation roadmap. This will be derived for individual applications with a clear migration path and modernization benefits.

We will work with application owners to gather qualitative information which in conjunction with quantitative information gathered through discovery tools will be analyzed using AI capabilities of Cloud Studio. Outcome will be clear cloud strategy, migration/modernization plan, APR & R-lane strategy, target architecture pattern etc.

Application Discovery & Assessment

Our structured rule based assessment leverages discovery tools & surveys

At this stage, the key findings will be shared and discussed with relevant stakeholders. The gaps (if any) will be filled and feedback incorporated. Final decisions about proposed modernization will be taken in conjunction with customer stackholders. Once signed off, these reports will guide the later phases of the migration.

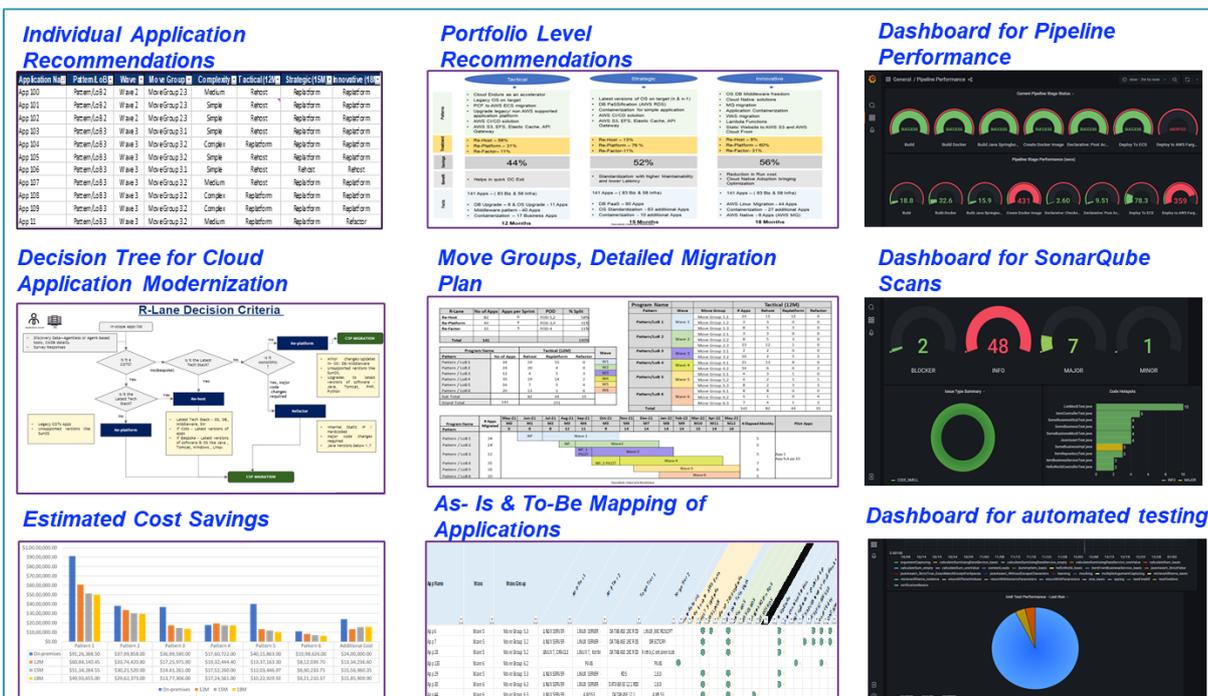

Deliverables: Wipro Cloud Studio platform provides a dashboard of application dispositions across R-Lanes (Re-host, Re-platform, Re-factor, Re-place, Re-architect), migration waves and pattern recommendations. These recommendations were iteratively fine-tuned for each business unit based on factors like application criticality and business roadmap. The dashboard also creates a budgeting view to show an indicative cost of hosting each application.

Every independent module has its own deliverable in form of a report & the same is captured across various dashboards in the cloud studio UI.

We also provide what-if analysis for an application by the chosen R-lane and indicative cost. This proved to be very useful for customers business units in building application specific business cases for re-host v/s re-platform or re-architect decisions. The tooling also produces a report of the current state for each application, and the recommended set of patterns to be applied on its migration journey. This helps creating short and long-term roadmaps for each application, and in aligning the application to the right migration train on the portfolio wave plan. The short-term guidance is produced to align with the immediate requirements other than addressing the long-term goals of agility and business capability alignment.

Sample dashboard & reports:

Reports:

Discovery Reports:

- Application Discovery Report

- Server Discovery Report
- Process Discovery Report
- Application Dependency Report

Assessment Reports

- Consolidated Application Assessment Report
- Application Move Group Report
- Per Application Report
- Pattern Matrix

Manual Reports

- Migration Wave Plan
- TCO & Business Case
- Engagement Summary
- Cloud Strategy Documents

Code Scan & Code Analysis Reports

- Cloud Readiness report

The levels of data backup and restore, and disaster recovery you'll provide, such as business continuity and disaster recovery plans

We leverage our solutions(Cloud Studio) & its repositories to capture & store data/information collected for assessment, analysis outcomes, final reports & recommendations. Well architected high availability and disaster recovery capabilities are in place to ensure business continuity. We will share with you artifacts generated across various stages of advisory services life cycle.

Any onboarding and offboarding support you provide

For discovery & assessment, we will onboard you onto our Cloud Studio solution. This solution will provide automation & AI capabilities to assess the IT landscape & generate deliverables. At the end of advisory engagement, we will share all the gathered data & various output reports with you and then will execute offboarding process.

Service constraints like maintenance windows or the level of customization allowed

We do not foresee any constraints apart from any planned/unplanned outages by cloud service provider. Our assessment rule engine is flexible to configure parameter weightage & algorithm based on your custom requirements.

Service levels like performance, availability, and support hours

Discovery & service is driven by cloud consultants supported through Wipro's Ips & solutions. Specifically, for Cloud Studio, we have a dedicated platform engineering team to support & ensure performance & availability

After sales support

Wipro will deliver the agreed outcome of this service. This engagement will be considered complete after your sign-off. Generally, advisory service is followed by subsequent phases of cloud adoption.

Any technical requirements

Discovery & assessment service may need installation of some tools within customer data center. We will work with you on hardware & access requirements based on type of tool selected in consultation with you. In case such tools are already available in your environment e.g. ServiceNow discovery, APM tools like Dynatrace etc we will leverage those tools in place of deploying new tool.

Outage and maintenance management

Discovery & assessment service is driven by cloud consultants supported through Wipro's Ips & solutions. Specifically, for Cloud Studio, we have a dedicated platform engineering team to support & ensure performance & availability

Hosting options and locations

Cloud Studio is used for this service. It provides flexible hosting models which include

- dedicated hosting on cloud in the region of your choice
- shared hosting on cloud
- dedicated hosting on-premise in your data center

Access to data (upon exit)

Upon exit all gathered data as well as output reports will be shared with customer. Any data fed into Wipro tools will be exported to desired available format (Excel, pdf, word etc) and shared with customer.

Security

Cloud Studio solution is deployed in secured environment with strong privilege management in place

About Wipro Limited

Wipro Limited (NYSE: WIT, BSE: 507685, NSE: WIPRO) is a leading technology services and consulting company focused on building innovative solutions that address clients' most complex digital transformation needs. Leveraging our holistic portfolio of capabilities in consulting, design, engineering, and operations, we help clients realize their boldest ambitions and build future-ready, sustainable businesses. With 250,000 employees and business partners across more than 60 countries, we deliver on the promise of helping our clients, colleagues, and communities thrive in an ever-changing world.
